# WELCOME & CONGRATULATIONS

## Product Registration Register Your Product

### The PRODUCT REGISTRATION CARD

should be filled in completely,  
signed and returned to  
Electrolux Home Products.

## Serial Plate Location

**Please record your model and serial numbers  
below for future reference.**

Model Number: \_\_\_\_\_

Serial Number: \_\_\_\_\_

Purchase Date: \_\_\_\_\_

Congratulations on your purchase of a new appliance! At **Electrolux Home Products**, we are very proud of our product and are completely committed to providing you with the best service possible. Your satisfaction is our number one priority.

We know you'll enjoy your new appliance and **Thank You** for choosing our product. We hope you consider us for future purchases.

### PLEASE CAREFULLY READ AND SAVE THESE INSTRUCTIONS

This Use & Care Manual contains general operating instructions for your appliance and feature information for several models. Your product **may not** have all the described features. The graphics shown are representative. The graphics on your appliance may not look exactly like those shown. These instructions are not meant to cover every possible condition and situation that may occur. Common sense and caution must be practiced when installing, operating and maintaining any appliance.

#### **NOTE**

Please attach sales receipt here for future reference.

# IMPORTANT SAFETY INSTRUCTIONS

**Read all instructions before using this appliance.**  
**Save these instructions for future reference.**

## DEFINITIONS

⚠ This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

### ⚠ WARNING

This symbol will help alert you to situations that may cause serious bodily harm, death or property damage.

### ⚠ CAUTION

This symbol will help alert you to situations that may cause bodily injury or property damage.

### → IMPORTANT

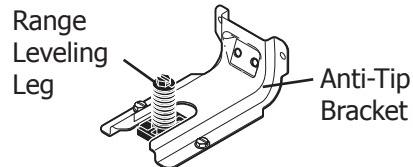

IMPORTANT indicates installation, operation or maintenance information which is important but not hazard-related.

### ⚠ WARNING

#### Tip Over Hazard

- A child or adult can tip the range and be killed.
- Verify the anti-tip device has been installed to floor or wall.
- Ensure the anti-tip device is re-engaged to floor or wall when the range is moved.
- Do not operate the range without the anti-tip device in place and engaged.
- Failure to follow these instructions can result in death or serious burns to children and adults.

To check if the anti-tip bracket is installed properly, use both arms and grasp the rear edge of range back. Carefully attempt to tilt range forward. When properly installed, the range should not tilt forward.

Refer to the anti-tip bracket **installation instructions** supplied with your range for proper installation.

• Remove all tape and packaging wrap before using the appliance. Destroy the carton and plastic bags after unpacking the appliance. Never allow children to play with packaging material. Do not remove the wiring label and other literature attached to the appliance. Do not remove model/serial number plate.

• **Proper Installation.** Be sure your appliance is properly installed and grounded by a qualified technician in accordance in the United States with the National Electrical Code ANSI/NFPA No. 70-latest edition, and local code requirements, and in Canada with CSA C22.1 PART 1-latest edition and local code requirements. Install only per installation instructions provided in the literature package for this range.

Ask your dealer to recommend a qualified technician and an authorized repair service. Know how to disconnect the electrical power to the appliance at the circuit breaker or fuse box in case of an emergency.

• **User Servicing.** Do not repair or replace any part of the appliance unless specifically recommended in the manuals. All other servicing should be done only by a qualified technician to reduce the risk of personal injury and damage to the appliance.

• **Never modify or alter the construction of an appliance by removing leveling legs, panels, wire covers, anti-tip brackets/screws, or any other part of the product.**

### ⚠ WARNING

**Stepping, leaning, sitting or pulling down on the door or the drawer of this appliance can result in serious injuries and also cause damage to the appliance.** Do not allow children to climb or play around the appliance. The weight of a child on an open door may cause the appliance to tip, resulting in serious burns or other injury. An open drawer when hot may cause burns.

### ⚠ WARNING

**Do not use the oven or warm & serve drawer (if equipped) for storage.**

• **Storage in or on Appliance.** Flammable materials should not be stored in an oven, near surface burners or in the warm & serve drawer (if equipped). This includes paper, plastic and cloth items, such as cookbooks, plastic ware and towels, as well as flammable liquids. Do not store explosives, such as aerosol cans, on or near the appliance. Flammable materials may explode and result in fire or property damage.

# IMPORTANT SAFETY INSTRUCTIONS

## CAUTION

**Do not store items of interest to children in the cabinets above the appliance.** Children climbing on the cooktop to reach items could be seriously injured.

- **Do not leave children alone. Children should not be left alone or unattended in the area where an appliance is in use.** They should never be allowed to sit or stand on any part of the appliance.
- **DO NOT TOUCH SURFACE UNITS, AREAS NEAR THESE UNITS, OVEN HEATING ELEMENTS OR INTERIOR SURFACES OF THE OVEN OR WARMER DRAWER (if equipped).** Both surface units and oven heating elements may be hot even though they are dark in color. Areas near surface units may become hot enough to cause burns. During and after use, do not touch, or let clothing or other flammable materials touch these areas until they have had sufficient time to cool. Among these areas are the cooktop, surfaces facing the cooktop, the oven vent openings and surfaces near these openings, oven door and window.
- **Wear Proper Apparel. Loose-fitting or hanging garments should never be worn while using the appliance.** Do not let clothing or other flammable materials contact hot surfaces.

## WARNING

**NEVER use your appliance as a space heater to heat or warm the room.**

- **Do Not Use Water or Flour on Grease Fires.** Smother the fire with a pan lid, or use baking soda, a dry chemical or foam-type extinguisher.
- **When heating fat or grease, watch it closely.** Fat or grease may catch fire if allowed to become too hot.
- **Use Only Dry Pot holders. Moist or damp pot holders on hot surfaces may result in burns from steam.** Do not let the pot holders touch hot surface units. Do not use a towel or other bulky cloth instead of a pot holder.
- **Do Not Heat Unopened Food Containers.** Buildup of pressure may cause the container to burst and result in injury.
- **Remove the oven door from any unused appliance if it is to be stored or discarded.**

## IMPORTANT

**Do not attempt to operate the appliance during a power failure. If the power fails, always turn off the unit.** If the unit is not turned off and the power resumes, the appliance will not operate and an error message will be displayed. Once the power resumes, reset the clock and the oven function.

## CAUTION

**Electronic controllers can be damaged by cold temperatures. When you use your appliance for the first time, or if it has not been used for a long period of time, make sure that it has been exposed to a temperature above 0°C/32°F for at least 3 hours before connecting it to the power supply.**

## IMPORTANT INSTRUCTIONS FOR USING YOUR COOKTOP

- **Know which knob controls each surface heating unit.** Place pan of food on the element before turning it on, and turn the element off before removing the pan.
- **Use Proper Pan Size**—This appliance is equipped with one or more surface burners of different sizes. Select utensils having flat bottoms large enough to cover the surface unit. The use of undersized utensils will expose a portion of surface heating unit to direct contact and may result in ignition of clothing. Proper relationship of utensil to the surface will also improve efficiency.
- **Utensil Handles Should Be Turned Inward and Should Not Extend Over Adjacent Surface Units**—To reduce the risk of burns, ignition of flammable materials, and spillage due to unintentional contact with the utensil. The handle of the utensil should be positioned so that it is turned inward, and does not extend over adjacent surface unit.
- **Do not use Searing Grill on the cooktop**—The Searing grill is not designed for use on the cooktop. Doing so may result in a fire.
- **Never Leave Surface Units Unattended**—Boilovers cause smoking and greasy spillovers that may ignite, or a pan that has boiled dry may melt.
- **Protective Liners**—Do not use aluminum foil to line oven bottom or any other part of the appliance. Only use aluminum as recommended for baking if used as a cover placed on the food. Any other use of protective liners or aluminum foil may result in a risk of electric shock or fire or a short circuit.
- **Glazed Cooking Utensils**—Only certain types of glass, glass/ceramic, ceramic, earthenware, or other glazed utensils are suitable for cooktop service without breaking

# IMPORTANT SAFETY INSTRUCTIONS

due to the sudden change in temperature. Check the manufacturer's recommendations for cooktop use.

- Do Not Use Decorative Surface Burner Covers.** If an element is accidentally turned on, the decorative cover will become hot and possibly melt. Burns will occur if the hot covers are touched. Damage may also be done to the cooktop.

## FOR GLASS COOKTOP ONLY

- Do Not Clean or Operate a Broken Cooktop**—If cooktop should break, cleaning solutions and spillovers may penetrate the broken cooktop and create a risk of electric shock. Contact a qualified technician immediately.
- Clean Cooktop Glass with Caution**—If a wet sponge or cloth is used to wipe spills on a hot cooking area, be careful to avoid a steam burn. Some cleaners can produce harmful fumes if applied to a hot surface.
- Avoid Scratching the Cooktop Glass with Sharp Objects.**

## IMPORTANT SAFETY INSTRUCTIONS FOR USING YOUR OVEN

- Use Care When Opening Oven Door or Warm & Serve Drawer (if equipped)**—Stand to the side of the appliance when opening the door/drawer of a hot appliance. Let hot air or steam escape before you remove or replace food in the oven/drawer.
- Keep Oven Vent Ducts Unobstructed.** The oven is vented at the back of the cooktop below backguard. Touching the surfaces in this area when the oven is operating may cause severe burns. Also, do not place plastic or heat-sensitive items on or near the oven vent. These items could melt or ignite.

### **WARNING**

**NEVER cover any slots, holes or passages in the oven bottom or cover an entire rack with materials such as aluminum foil.** Doing so blocks air flow through the oven and may cause carbon monoxide poisoning. Aluminum foil linings may trap heat, causing a fire hazard.

- Placement of Oven/Warm & Serve Drawer (if equipped) Racks.** Always place oven/Warm & Serve Drawer (if equipped) racks in desired location while appliance is cool. Remove all utensils from the rack before removing rack. If rack must be moved while oven is hot, use extreme caution. Use pot holders and grasp the rack with both hands to reposition. Do not let pot holders contact the hot oven element or interior of the oven/Warm & Serve Drawer (if equipped).
- Do not use a broiler pan without its insert.** Broiler pan and grid allow dripping fat to drain and be kept away from the high heat of the broiler.

**Do not cover the broiler grid or oven bottom with aluminum foil.** Exposed fat and grease could ignite.

**Do not touch a hot oven light bulb with a damp cloth.** Doing so could cause the bulb to break. Disconnect the appliance or shut off the power to the appliance before removing and replacing the bulb.

## IMPORTANT SAFETY INSTRUCTIONS FOR CLEANING YOUR OVEN

- Clean the appliance regularly to keep all parts free of grease that could catch fire.** Exhaust fan ventilation hoods and grease filters should be kept clean. Do not allow grease to accumulate. Greasy deposits in the fan could catch fire. Refer to the hood manufacturer's instructions for cleaning.
- Cleaners/Aerosols**—Always follow the manufacturer's recommended directions for use. Be aware that excess residue from cleaners and aerosols may ignite causing damage and/or injury.
- Clean in the self-cleaning cycle only the parts of the appliance listed in this Owner's Guide.** Before using the self-cleaning cycle of the appliance, remove all utensils stored in the appliance.
- Do not clean the oven door gasket.** The door gasket is essential for a good seal. Care should be taken not to rub, damage or move the gasket.
- Do not use oven cleaners.** No oven cleaner or oven liner protective coating of any kind should be used in or around any part of the appliance.
- Remove oven racks.** Oven racks color will change if left in the oven during a self-cleaning cycle.

### **CAUTION**

The health of some birds is extremely sensitive to the fumes given off during the self-clean cycle of any wall oven. Move birds to another well ventilated room.

### **IMPORTANT SAFETY NOTICE**

The California Safe Drinking Water and Toxic Enforcement Act requires the Governor of California to publish a list of substances known to the state to cause cancer, birth defects or other reproductive harm, and requires businesses to warn customers of potential exposure to such substances.

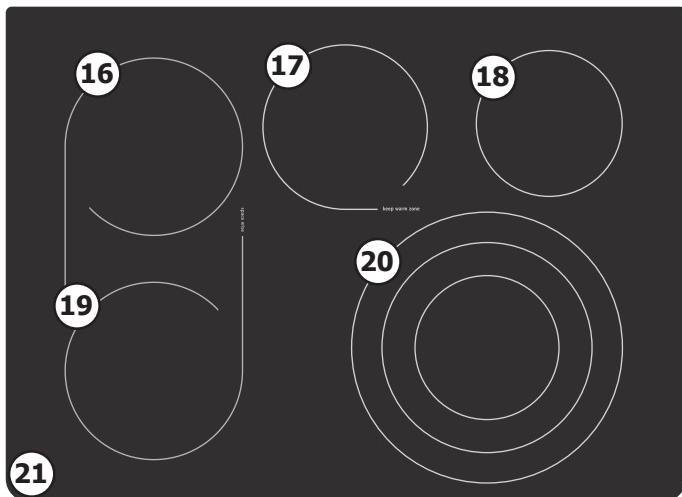

## SAVE THESE INSTRUCTIONS FOR FUTURE REFERENCE.

# FEATURES AT A GLANCE

## YOUR BUILT-IN RANGE FEATURES:

1. Electronic oven control with kitchen timer.
2. Left front element control and electronic display.
3. Left rear element control and electronic display.
4. Right rear element control and electronic display.
5. Right front element control and electronic display.
6. Keep warm zone control.
7. Lower oven self-clean door latch.
8. Lower and upper oven vent.
9. Broil element.
10. Self-cleaning oven interior.
11. Oven interior light with removable cover.
12. Adjustable interior oven rack(s).
13. Large 1-piece oven door handle.
14. Full width lower oven door with window.
15. Full width upper oven door with window.
16. 7" single radiant element.
17. Keep warm radiant element.
18. 6" single radiant element.
19. 7" bridge radiant element.
20. 6"/9"/12" triple radiant element.
21. Ceramic glass cooktop.

### NOTE

The features shown for your appliance may vary according to model type & color.

# BEFORE SETTING SURFACE CONTROLS

## COOKTOP DISPLAY WINDOWS

The cooktop controls provide a digital display for each element located on the cooktop. Power levels and messages are easily monitored and adjusted using the corresponding control keypads in combination with the **window displays**.

## THE AVAILABLE POWER LEVEL SETTINGS

The cooktop control will display heat levels ranging from **Hi** (Figure 1) to **Lo** (Figure 6) and **OFF** (Figure 7). The settings between **9.5** (Figure 2) and **3.0** (Figure 3) decrease or increase in increments of .5 (1/2). The settings between **2.8** (Figure 4) and **1.2** (Figure 5) are Simmer settings which decrease or increase in increments of .2 (1/5) to **Lo** (Figure 6; lowest Simmer setting) for more precise settings at lower heat levels.

Fig. 1

Fig. 2

Fig. 3

Fig. 4

Fig. 5

Fig. 6

Fig. 7

## HOT ELEMENT INDICATOR MESSAGE (HE)

**CAUTION** After using any of the radiant element positions the cooktop will become very hot. Even after turning the element OFF, the cooktop will remain hot for some time and burns may occur if surface is touched. The control monitors the temperature of the cooktop and displays the message "**HE**" (hot element) warning when the cooktop is still too hot to touch (Figure 8). If the **HE** message appears in the window, the control can still be turned on again for use.

Fig. 8

## POWER FAILURE (PF) MESSAGE

The **PF** message (Figure 9) will be displayed whenever there has been a power interruption to the appliance. The **PF** message will disappear by itself after a few seconds.

Fig. 9

## COOKTOP LOCKOUT (--) MESSAGE

The cooktop lockout (--) message will appear in the cooktop display windows whenever the Lockout feature is active or during a self clean (See Fig. 10). The cooktop will remain locked until the Flex Clean cycle is finished and the oven door has unlocked or until the Lockout feature is deactivated.

Fig. 10

## SABBATH FEATURE (SB) MESSAGE

The cooktop display windows will show the **Sb** message whenever the Sabbath feature is active (Figure 11). When activated, the Sabbath feature works for both the oven and cooktop together. Once the Sabbath feature is active, changes to the heat levels for the cooktop heating elements will not show in the displays. The cooktop will react slower to heat level changes. See **Sabbath feature** section for complete instructions.

Fig. 11

# BEFORE SETTING SURFACE CONTROLS

## USING PROPER COOKWARE

The size and type of cookware used will influence the setting needed for best cooking results. Be sure to follow the recommendations for using proper cookware as illustrated in Figures 1 & 2.

Cookware should have flat bottoms that make good contact with the entire surface heating element (Figure 1). Check for flatness by rotating a ruler across the bottom of the cookware (Figure 2).

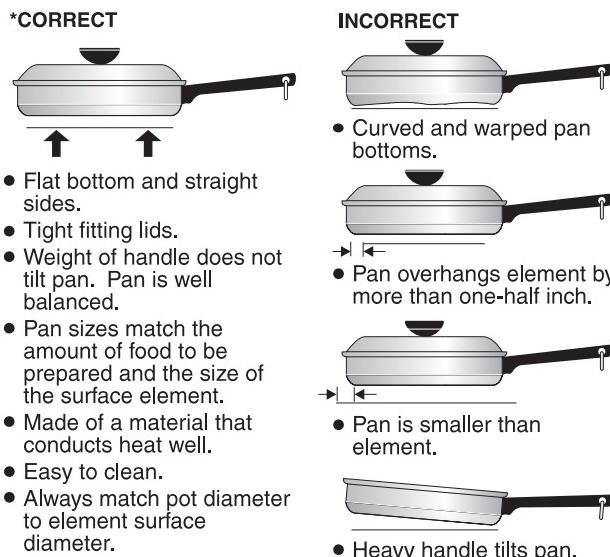

Figure 1

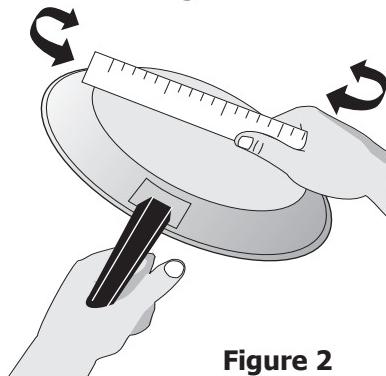

Figure 2

## ABOUT THE CERAMIC GLASS COOKTOP

The ceramic cooktop has radiant surface elements located below the surface of the glass. The design of the ceramic cooktop outlines the area of the surface element underneath. **Be sure** to match the pan size with the diameter of the element outline on the cooktop and only flat-bottom cookware should be used.

The type and size of cookware, the number of surface elements in use and their settings, are all factors that will affect the amount of heat that will spread to areas beyond the surface elements. The areas surrounding the elements may become **hot enough to cause burns**.

## ABOUT THE RADIANT SURFACE ELEMENTS

The element temperature rises gradually and evenly. As the temperature rises, the element will glow red. To maintain the selected setting the element will cycle on and off. The heating element retains enough heat to provide a uniform and consistent heat during the off cycle.

For efficient cooking, turn off the element several minutes before cooking is complete. This will allow residual heat to complete the cooking process.

### NOTE

Radiant elements have a limiter that allows the element to cycle ON and OFF, even at the HI setting. This helps to prevent damage to the ceramic smooth top. Cycling at the HI setting is normal and can occur if the cookware is too small for the radiant element or if the cookware bottom is not flat.

Be sure to read detailed instructions for ceramic glass cooktop cleaning in the **General Care & Cleaning** section and **Before You Call** checklist section of this Use and Care Guide.

## Cookware material types

The cookware material determines how evenly and quickly heat is transferred from the surface element to the pan bottom. The most popular materials available are:

**Aluminum**- Excellent heat conductor. Some types of food will cause it to darken (Anodized aluminum cookware resists staining & pitting). If aluminum pans slide across the ceramic glass cooktop, they may leave metal marks which will resemble scratches. Remove these marks immediately.

**Copper**- Excellent heat conductor but discolors easily. May leave metal marks on ceramic glass (see Aluminum above).

**Stainless steel**- Slow heat conductor with uneven cooking results. Is durable, easy to clean and resists staining.

**Cast iron**- A poor heat conductor however will retain heat very well. Cooks evenly once cooking temperature is reached. Not recommended for use on ceramic cooktops.

**Porcelain-enamel on metal**- Heating characteristics will vary depending on base material. Porcelain-enamel coating must be smooth to avoid scratching ceramic cooktops.

**Glass**- Slow heat conductor. Not recommended for ceramic cooktop surfaces because it may scratch the glass.

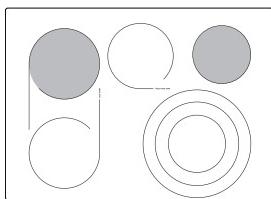

### NOTE

Due to the high intensity of heat generated by the surface elements, the glass surface will turn light green when the element will be turned off. This phenomenon is normal and the glass will come back to its original white color after it has completely cooled down. (White glass cooktops only).

# SETTING SURFACE CONTROLS

## SINGLE RADIANT ELEMENT

The cooktop provides single radiant element located as illustrated. Use the following instructions when operating these elements.

The suggested power level settings shown in Fig. 1 are based on cooking with medium sized aluminum pans with lids. Be sure to make any further setting adjustments for best surface cooking results.

### Suggested element power level settings table

Setting	Type of cooking
High (8.0 - Hi)	Start most foods, bring water to a boil, pan broiling.
Medium high (5.0-8.0)	Continue a rapid boil, fry, deep fat fry.
Medium (3.0 - 5.0)	Maintain a slow boil, thicken sauces and gravies or steam vegetables.
Medium low (2.0 - 3.0)	Keep foods cooking, poach, stew (2.8 or lower is a simmer setting).
Low (Lo - 2.0)	Keep warm, melt, simmer (2.8 or lower is a simmer setting).

Fig. 1

### Hot Element Indicator Message

After using any of the radiant element positions the cooktop will become very hot. Even after setting the controls to OFF, the cooktop will remain hot for some time. The cooktop control monitors the temperature of the cooktop and displays the message "HE" (hot element) warning when the cooktop is still too hot to touch. If the HE message appears in the window, the control can still be turned on again for use.

### CAUTION

- Radiant surface elements may appear to have cooled after they have been turned off. **The glass surface may still be hot** and burns may occur if the glass surface is touched before it has cooled sufficiently.
- Do not place aluminum foil, plastic items such as salt and pepper shakers, spoon holders or plastic wrappings on top of the range when it is in use.** These items could melt or ignite. Potholders, towels or wooden spoons could catch fire if placed too close to the surface elements.

### To Operate the Single Radiant Surface Elements:

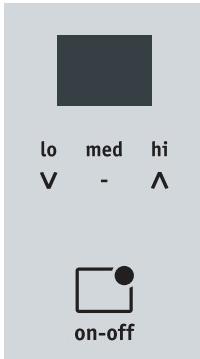

- Place correctly sized cookware on the radiant surface element.
- Touch and hold the **on-off** pad for the desired element position until a beep is heard. The display will show "--".

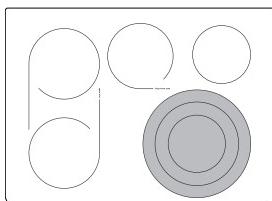

Diagram illustrating the control panel for the radiant element. It shows a large black square button labeled "on-off" with a small circle in the center. Below the button are three smaller buttons labeled "lo", "med", and "hi" from left to right, with a small minus sign between "lo" and "med".
- Note:** If no further pads are touched within 10 seconds the request to power the element ON will clear.
- Touch **hi** pad once to turn ON the power level to Hi.  
Touch **lo** pad once to turn ON the power level to Low.  
Touch **med** pad once to turn ON the power level to 5.0.
- Each touch of the **hi** or **lo** pad will decrease or increase the power level from Hi through 3.0 by .5 increments. Simmer power levels between 3.0 and 1.2 will decrease or increase by .2 increments. Lo is the lowest power level available.  
**Note:** The power level may be adjusted at any time while the element is ON.
- When cooking has been completed touch the **on-off** pad once to turn the element OFF.

### Important notes:

- Start most cooking operations on a higher setting and then turn to a lower setting to finish cooking.
- For efficient cooking, turn the surface element OFF several minutes before cooking is complete. This will allow residual heat to complete the cooking process.
- A glowing red surface heating area extending beyond the bottom edge of the cookware indicates the cookware is **too small** for the surface heating area.
- Radiant elements have a limiter that allows the radiant heating element to cycle ON and OFF, even at the HI setting. This helps prevent damage to the ceramic cooktop. Cycling at the HI setting is normal and will occur more often if the cookware is too small for the radiant element or if the cookware bottom is not flat.

# SETTING SURFACE CONTROLS

## TRIPLE RADIANT ELEMENT

The cooktop provides a triple radiant element located as illustrated. Use the following instructions when operating this element.

Use the **Size** keypad (Fig. 1) to select which portions of the triple element are needed for heating. The triple element size may be changed anytime the element is ON.

### To Operate the Triple Radiant Elements:

1. Place correctly sized cookware on the triple radiant element.
2. To activate press and hold the **on-off** keypad for the triple element until acceptance tone sounds.
3. Press **Size** keypad and toggle to select the single (Fig. 2), double (Fig. 3) or triple (Fig. 4) element size setting.
4. To set power level press **hi**, **med** or **lo** keypad and if needed toggle the **hi** or **lo** keypads to adjust to the desired power level setting. Each touch of the **hi** or **lo** key pad will increase or decrease the power level by 1/2 from 9.0 through 3.0. Simmer power levels between 3.0 and 1.2 will increase or decrease by .2 increments. **Hi** (Fig. 5) is the highest power level. **Lo** (Fig. 6) is the lowest power level available.
5. Once cooking is finished, press **on-off** keypad to turn the triple element OFF (Fig. 7).

### Hot Element Indicator Message

After using any of the radiant element positions the cooktop will become very hot. Even after setting the controls to OFF, the cooktop will remain hot for some time. The cooktop control monitors the temperature of the cooktop and displays the message "**HE**" (hot element) warning when the cooktop is still too hot to touch. If the **HE** message appears in the window, the control can still be turned on again for use.

### CAUTION

- Radiant surface elements may appear to have cooled after they have been turned off. **The glass surface may still be hot** and burns may occur if the glass surface is touched before it has cooled sufficiently.
- **Do not place aluminum foil, plastic items such as salt and pepper shakers, spoon holders or plastic wrappings on top of the range when it is in use.** These items could melt or ignite. Potholders, towels or wooden spoons could catch fire if placed too close to the surface elements.

Fig. 1

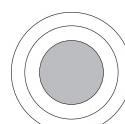

Fig. 2

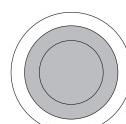

Fig. 3

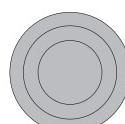

Fig. 4

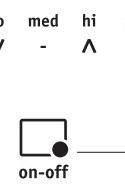

Fig. 5

Fig. 6

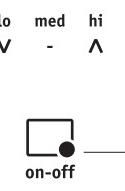

Fig. 7

### Important notes:

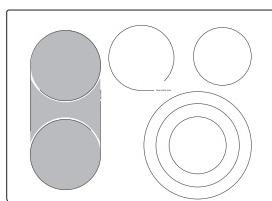

- If no element size is chosen when the triple element is turned ON, only the inner coil will heat by default.
- Start most cooking operations on a higher setting and then turn to a lower setting to finish cooking.
- For efficient cooking, turn the surface element OFF several minutes before cooking is complete. This will allow residual heat to complete the cooking process.
- A glowing red surface heating area extending beyond the bottom edge of the cookware indicates the cookware is **too small** for the surface heating area.
- Radiant elements have a limiter that allows the radiant heating element to cycle ON and OFF, even at the **HI** setting. This helps prevent damage to the ceramic cooktop. Cycling at the **HI** setting is normal and will occur more often if the cookware is too small for the radiant element or if the cookware bottom is not flat.

### NOTE

See Suggested Element Power Level Settings Table on page 9.

# SETTING SURFACE CONTROLS

## BRIDGE RADIANT ELEMENT

The cooktop provides a bridge radiant element located as illustrated. Use the following instructions when operating this element.

Use the **Size** keypad (Fig. 1) to select which portions of the bridge element are needed for heating. The bridge element size may be changed anytime the element is ON.

### To Operate the Triple Radiant Elements:

1. Place correctly sized cookware on the bridge radiant element.
2. To activate press and hold the **on-off** keypad for the bridge element until acceptance tone sounds.
3. Set the element size. Press **Size** keypad once for front (Fig. 2), twice for front with middle (Fig. 3) or 3 times for front, middle and rear (Fig. 4).
4. To set power level press **hi**, **med** or **lo** keypad and if needed toggle the **hi** or **lo** keypads to adjust to the desired power level setting. Each touch of the **hi** or **lo** key pad will increase or decrease the power level by 1/2 from 9.0 through 3.0. Simmer power levels between 3.0 and 1.2 will increase or decrease by .2 increments. **Hi** (Fig. 5) is the highest power level. **Lo** (Fig. 6) is the lowest power level available.
5. Once cooking is finished, press **on-off** keypad to turn the triple element OFF (Fig. 7).

### Hot Element Indicator Message

After using any of the radiant element positions the cooktop will become very hot. Even after setting the controls to OFF, the cooktop will remain hot for some time. The cooktop control monitors the temperature of the cooktop and displays the message "**HE**" (hot element) warning when the cooktop is still too hot to touch. If the **HE** message appears in the window, the control can still be turned on again for use.

### CAUTION

- Radiant surface elements may appear to have cooled after they have been turned off. **The glass surface may still be hot** and burns may occur if the glass surface is touched before it has cooled sufficiently.
- **Do not place aluminum foil, plastic items such as salt and pepper shakers, spoon holders or plastic wrappings on top of the range when it is in use.** These items could melt or ignite. Potholders, towels or wooden spoons could catch fire if placed too close to the surface elements.

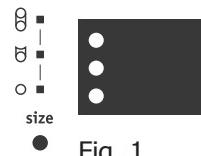

Fig. 1

Fig. 2

Fig. 3

Fig. 4

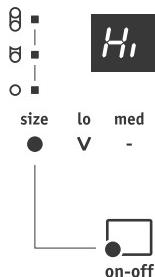

Fig. 5

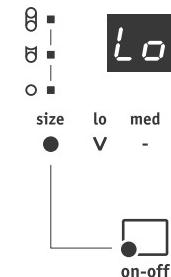

Fig. 6

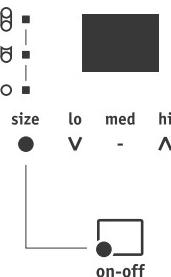

Fig. 7

### Important notes:

- If all 3 bridge elements are set to be active together and the left rear element is needed with a different power level setting, change the bridge size to **O** or **◎** and then set the left rear power level independently.
- If no element size is chosen when the bridge element is turned ON, only the front will heat by default.
- Start most cooking operations on a higher setting and then turn to a lower setting to finish cooking.
- For efficient cooking, turn the surface element OFF several minutes before cooking is complete. This will allow residual heat to complete the cooking process.
- A glowing red surface heating area extending beyond the bottom edge of the cookware indicates the cookware is **too small** for the surface heating area.
- Radiant elements have a limiter that allows the radiant heating element to cycle ON and OFF, even at the **HI** setting. This helps prevent damage to the ceramic cooktop. Cycling at the **HI** setting is normal and will occur more often if the cookware is too small for the radiant element or if the cookware bottom is not flat.

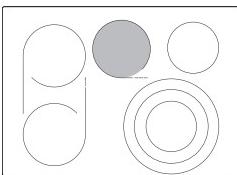

### NOTE

See Suggested Element Power Level Settings Table on page 9.

# SETTING SURFACE CONTROLS

## KEEP WARM ZONE

The cooktop provides a keep warm zone located as illustrated. Use the following instructions when operating this element.

The purpose of the keep warm zone is to keep hot cooked foods at serving temperature. Use the keep warm feature to keep cooked foods hot such as: vegetables, gravies, casseroles, soups, stews, breads, pastries and oven-safe dinner plates.

Always start with hot food. It is not recommended to heat cold food on the keep warm zone. All food placed on the keep warm zone should be covered with a lid to maintain quality.

For best results, when warming pastries or breads, the cover should have an opening to allow moisture to escape. **Do not use plastic wrap to cover food. Plastic may melt onto the surface and be very difficult to clean.** Use only plates, utensils and cookware recommended for oven and cooktop use on the keep warm zone.

### To Set the keep warm zone control

NOTE: The controls and indicator light are located on the control panel.

1. Touch the **on-off** pad (Fig. 4) at the keep warm zone control position. The keep warm indicator light will flash.

**Note:** If no further pads are touched within 25 seconds the request to power the keep warm zone ON will clear.

2. At the keep warm controls position touch **temp** once to turn ON the the warm zone at the LO (Fig. 3) power level.
3. Each touch of **temp** will increase the power levels. The keep warm zone has 3 power levels from LO (Fig. 1) through MED (Fig. 2) to HI (Fig. 3) and back to LO. The power level may be adjusted at any time while the keep warm zone is ON.
4. When it is time to serve the food, touch the **on-off** pad once to turn the keep warm zone OFF. The keep warm zone indicator light will turn OFF.

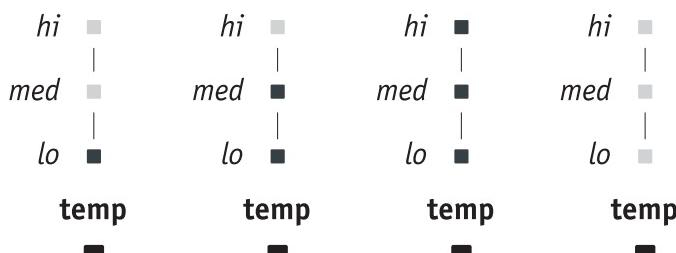

Figure 1

Figure 2

Figure 3

Figure 4

## CAUTION

The keep warm zone will not glow red when it is hot, but becomes hot enough to cause burns. Avoid placing hands on or near the keep warm zone until the keep warm zone hot surface indicator light is OFF. Always use potholders or oven mitts when removing food from the keep warm zone as cookware and plates will be hot.

## CAUTION

**Do not place plastic items such as salt and pepper shakers, spoon holders or plastic wrappings on cooktop when it is in use.** These items could melt or ignite. Potholders, towels or wooden spoons could catch fire if placed too close to the surface elements.

**Do not allow aluminum foil, or ANY material that can melt to make contact with the ceramic glass cooktop.** If these items melt on the cooktop they will damage the ceramic cooktop.

### Keep warm zone temperature selection

Refer to the keep warm zone table for recommended heating levels. If a particular food is not listed, start with the medium level, and adjust as needed. Most foods can be kept at serving temperatures by using the medium level.

Keep warm zone recommended food settings table

Food Item	Setting
Bacon	HI
Hamburger Patties	HI
Poultry, Pork Chops	HI
Fried Foods, Pizza	HI
Gravies, Casseroles	MED
Vegetables, Eggs	MED
Roasts (Beef, Pork, Lamb)	MED
Biscuits, Pastries	MED
Rolls, hard	MED
Rolls (soft)	LO
Empty Dinner Plates	LO

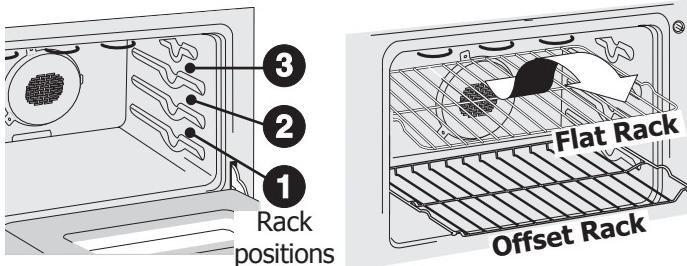

# BEFORE SETTING OVEN CONTROLS

## ARRANGING OVEN RACKS

ALWAYS ARRANGE OVEN RACKS WHEN THE OVEN IS COOL (PRIOR TO OPERATING THE OVEN). Always use oven mitts when using the oven.

**To remove an oven rack**, pull the rack forward until it stops. Lift up front of rack and slide out.

**To replace an oven rack**, fit the rack onto the guides on the oven walls. Tilt the front of the rack upward and slide the rack back into place.

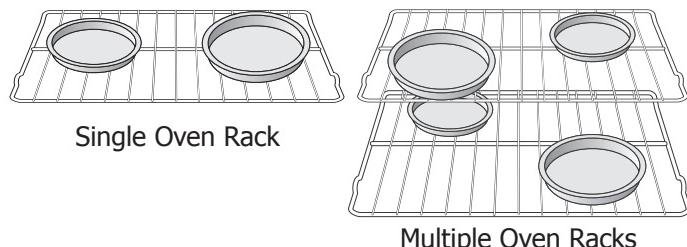

## RECOMMENDED RACK POSITIONS

Food	Upper Oven	Lower Oven
Broiling meats, chicken or fish	3	3
Cookies, cakes, pies, biscuits & muffins		
Using a single rack	2	2
Using two racks	1 and 3	1 and 3
Using multiple racks	1, 2 and 3	1, 2 and 3
Frozen pies, angel food cake, yeast, bread, 1 or 2 casseroles, small cuts of meat or poultry	1 or 2	1 or 2
Turkey, roast or ham	1	1

## AIR CIRCULATION IN THE OVEN

If using 1 rack, place in center of oven. If using multiple racks, stagger cookware as shown.

For best air circulation and baking results allow 2-4" (5-10 cm) around the cookware for proper air circulation and be sure pans and cookware do not touch each other, the oven door, sides or back of the oven cavity. The hot air must circulate around the pans and cookware in the oven for even heat to reach around the food.

## NOTE

Always use caution when removing food from the oven.

## Oven vents location

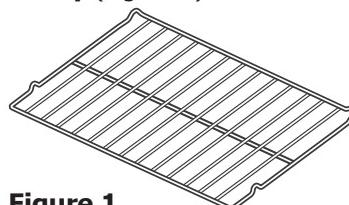

The upper and lower ovens are vented **at the back of the cooktop**. When an oven is on, warm air is released through its vent. This venting is necessary for proper air circulation in the oven and good baking results. **DO NOT BLOCK OVEN VENTS.** Never close off the openings with aluminium foil or any other material.

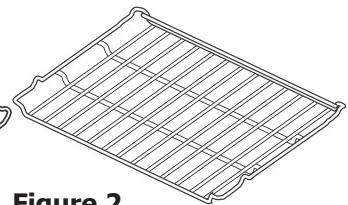

## TYPES OF OVEN RACKS

Your built-in range may be equipped with one or more of the oven racks styles shown;

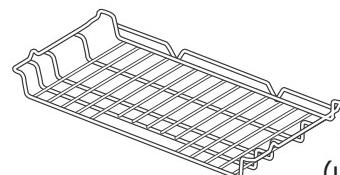

- **Flat handle oven rack** (Figure 1).
- **Offset oven rack** (Figure 2).
- **Offset handle oven rack to use with upper oven only** (Figure 3).

**Figure 1**  
Flat handle oven rack

**Figure 2**  
Offset oven rack

**Figure 3**  
Offset handle oven rack  
(use with upper oven only)

## CAUTION

Always use pot holders or oven mitts when adjusting the oven racks. Wait until the oven has completely cooled if possible. Oven racks may be HOT and may cause burns.

The **Flat Oven Handle Rack** has a handle to facilitate the sliding of the rack when large amount of foods weight on it (See Figure 1).

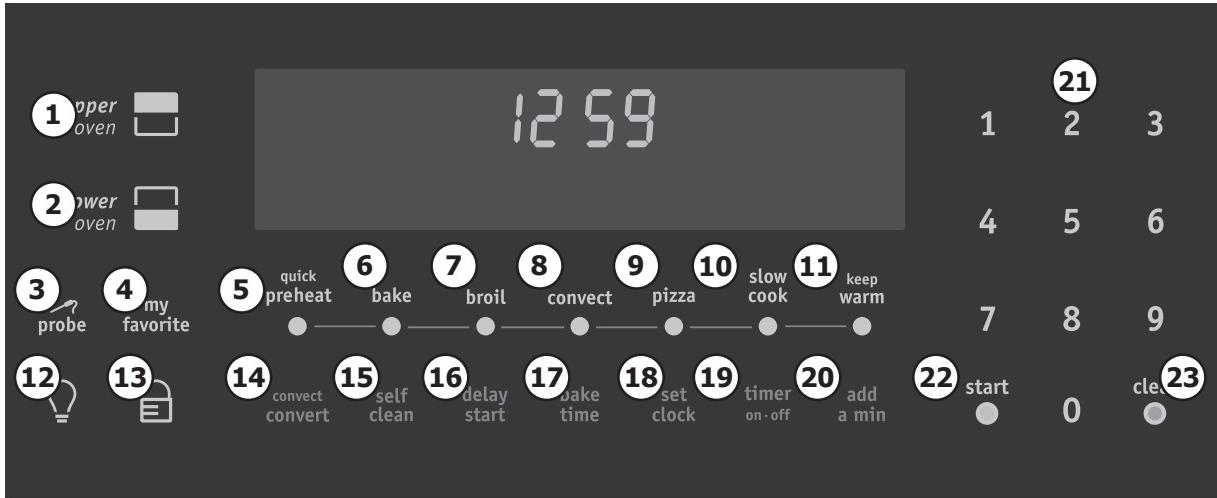

The **Offset Oven Rack** is used to maximize cooking space (See Figure 2). The offset rack can be used in the lower rack position to roast large cuts of meat and poultry.

The **Offset Handle Oven Rack** is used to maximize cooking space (See Figure 3). The offset rack can be used only in the lower rack position of the upper oven only.

# SETTING OVEN CONTROLS

## CONTROL PAD FEATURES

**READ THE INSTRUCTIONS CAREFULLY BEFORE USING THE OVEN.** For satisfactory use of your oven, become familiar with the various features and functions of the oven as described below. **Detailed instructions for each feature and function follow later in this Use & Care Guide.**

1. **Upper oven pad**—Use to activate the upper oven for cooking operation.
2. **Lower oven pad**—Use to activate the lower oven for cooking operation.
3. **Probe (upper oven only)**— Use to activate the meat probe mode.
4. **My favorite**— Use to record a temperature setting for a cooking feature.
5. **Quick preheat pad**—Use to quickly raise oven to cooking temperature.
6. **Bake pad**—Use to select the bake cooking feature.
7. **Broil pad**—Use to select the broil cooking feature.
8. **Convect pad**—Use to select between the Convection Bake and Convection Roast cooking features.
9. **Pizza pad**—Use to select the pizza cooking feature.
10. **Slow cook pad**—Use to select the slow cook cooking feature.
11. **Keep warm pad**—Use to keep the dishes and food warm until served
12. **Oven light pad**—Use to turn the oven light ON and OFF.
13. **Oven lockout pad**—Use to lock the oven door and the control panel pads.
14. **Convect convert pad**—Use to convert a regular recipe temperature to a convection temperature.
15. **Self-Clean pad**—Use to select the self cleaning feature.
16. **Delay start pad**—Use to program a Delayed Timed Bake or Delay Self-Cleaning cycle start time.
17. **Bake time pad**—Use to enter the length of the baking time.
18. **Set clock pad**—Use to set the time of day.
19. **Timer on-off pad**—Use to set or cancel the Timer. The Timer does not start or stop cooking.
20. **Add a minute pad**—Use to add a minute to the timer feature.
21. **Numeric pad**—Use to enter temperatures and times.
22. **Start pad**—Use to start all oven features (not used with Oven Light).
23. **Clear pad**—Use to cancel any oven feature previously entered except the time of day and minute timer.

## SETTING OVEN CONTROLS

### MINIMUM AND MAXIMUM CONTROL PAD SETTINGS

All of the features listed below have minimum and maximum time or temperature settings that may be entered into the control. An ENTRY acceptance beep will sound each time a control pad is touched (the acceptance beep on the Oven Lockout pad is delayed 3 seconds).

An ENTRY ERROR tone (3 short beeps) will sound if the entry of the temperature or time is below the minimum or above the maximum settings for the feature.

<u>FEATURE</u>		<u>MINIMUM TEMP. / TIME</u>	<u>MAXIMUM TEMP. / TIME</u>
PREHEAT		170°F/77°C	550°F/288°C
BAKE		170°F/77°C	550°F/288°C
BROIL		400°F/205°C	550°F/288°C
CONVECTION BAKE		170°F/77°C	550°F/288°C
CONVECTION ROAST		170°F/77°C	550°F/288°C
PIZZA		170°F/77°C	550°F/288°C
KEEP WARM		150°F/60°C	190°F/86°C
TIMER	12 Hr. Mode	0:01 Min.	11:59 Hr./Min.
	24 Hr. Mode	0:01 Min.	11:59 Hr./Min.
CLOCK TIME	12 Hr. Mode	1:00 Hr./Min.	12:59 Hr./Min.
	24 Hr. Mode	0:00 Hr./Min.	23:59 Hr./Min.
DELAY START	12 Hr. Mode	1:00 Hr./Min.	12:59 Hr./Min.
	24 Hr. Mode	0:00 Hr./Min.	23:59 Hr./Min.
BAKE TIME	12 Hr. Mode	0:01 Min.	11:59 Hr./Min.
	24 Hr. Mode	0:01 Min.	11:59 Hr./Min.
SELF CLEAN TIME		2 hours	4 hours

### IMPORTANT THINGS TO KNOW BEFORE SETTING ANY OVEN COOKING FEATURE

This appliance has been factory pre-set to start any **BAKE**, **CONVECTION BAKE**, **CONVECTION ROAST** or **QUICK PREHEAT** feature with the oven set temperature automatically set for 350°F. The **BROIL** feature is pre-set at 550°F. However if desired, the oven set temperature may be adjusted at any time during the cooking process. You may also choose to add a **BAKE TIME** or **DELAY START** with most of the functions listed above, unless specified in their corresponding section.

### TEMPERATURE VISUAL DISPLAY

Your oven is equipped with a temperature visual display. When a cooking mode is set, the actual temperature will be shown in the display and will rise as the unit preheat. When the unit has reached its target temperature, a chime will sound to remind you to place the food in the oven. This feature will be active with some cooking modes; **BAKE**, **CONVECTION BAKE**, **CONVECTION ROAST** and **PIZZA**.

#### NOTE

The lowest temperature that can be displayed is 100°F.

# SETTING OVEN CONTROLS

## SETTING THE CLOCK

The **SET CLOCK** pad is used to set the clock. The clock may be set for 12 or 24 hour time of day operation. The clock has been preset at the factory for the 12 hour operation. When the range is first plugged in, or when the power supply to the range has been interrupted, the timer in the display will flash.

### To set the clock (example below for 1:30)

1. Press **SET CLOCK**. "CLO" will appear in the display.
2. Press **1 3 0** pads to set the time of day to 1:30. "CLO" will stay in the display.
3. Press **START**. "CLO" will disappear and the clock will start.

## CHANGING BETWEEN 12 OR 24 HOUR TIME OF DAY DISPLAY

1. Press and hold **SET CLOCK** for 6 seconds. "CLO" will appear in the display.
2. **CONTINUE** holding the pad until "12Hr dAY" or "24Hr dAY" appears in the display and the control beeps once.
3. Press **SELF CLEAN** to switch between the 12 and 24 hour time of day display. The display will show either "12Hr dAY" or "24Hr dAY".
4. Press **START** to accept the change or press **CLEAR** to reject the change.
5. Reset the correct time as described in **To set the Clock** above. Please note that if the 24 hour time of day mode was chosen, the clock will now display time from 0:00 through 23:59 hours.

## SETTING CONTINUOUS BAKE OR 6 HOUR ENERGY SAVING

The **TIMER** and **SELF CLEAN** pads control the Continuous Bake or 6 Hour Energy Saving features. The oven control has a factory preset built-in 6 Hour Energy Saving feature that will shut off the oven if the oven control is left on for more than 6 hours. The oven can be programmed to override this feature for Continuous Baking.

### To set the control for Continuous Bake or 6 Hour Energy Saving features

1. Press and hold **TIMER** for 6 seconds. After 6 seconds "6Hr OFF" or "StAY On" will appear in the display and the control will beep once.
2. Press **SELF CLEAN** to switch between the 6 Hour Energy Saving and continuous bake features.  
**Note:** "6Hr OFF" in the display indicates the control is set for the 6 Hour Energy Saving mode and "StAY On" indicates the control is set for the Continuous Bake feature.
3. Press **START** to accept the change (display will return to time of day) or press **CLEAR** to reject the change.

## SETTING TEMPERATURE DISPLAY — FAHRENHEIT OR CELSIUS:

The **BROIL** and **SELF CLEAN** pads control the Fahrenheit or Celsius temperature display modes. The oven control can be programmed to display temperatures in Fahrenheit or Celsius. The oven has been preset at the factory to display in Fahrenheit.

### To change display from Fahrenheit to Celsius or Celsius to Fahrenheit

1. To tell if the display is set for Fahrenheit or Celsius press **BROIL** and hold it for 6 seconds; "550°" will appear and "BROIL" will flash in the display and a beep will sound. If "F" appears, the display is set to show temperatures in Fahrenheit. If "C" appears, the display is set to show temperatures in Celsius.
2. Press **SELF CLEAN** to switch between Fahrenheit or Celsius display modes. The display will show either "F" or "C".
3. Press **START** to accept the change or press **CLEAR** to reject the change.

## SETTING LOCKOUT FEATURE

The  pad controls the Lockout feature. The Lockout feature automatically locks the oven doors, the control panel and the cooktop. It does not disable the Minute Timer or the interior oven lights.

### To activate the Lockout feature

1. Press and hold  for 3 seconds.
2. After 3 seconds "Loc" and "Control" will appear, a beep will sound, "UPPER", "LOWER" and "DOOR" will flash in the display. Once the oven door is locked the "DOOR" will stop flashing and remain on along with the "Loc", "Control" and the  icon will appear.

### To reactivate normal operation:

1. Press and hold  for 3 seconds. A beep will sound. The "UPPER", "LOWER" and "DOOR" will flash in the display until the oven door has completely unlocked and the  icon will disappear.
2. The unit is again fully operational.

### NOTE

The surface elements cannot be activated when the Lockout feature is active (see the section: **The electronic surface element control (ESEC)**).

## SETTING SILENT CONTROL OPERATION

The **DELAY START** and **SELF CLEAN** pads control the Silent Control operation feature. The Silent Control operation feature allows the oven control to be operated without sounds or beeps whenever necessary. If desired the control can be programmed for silent operation and later returned to operating with all the normal sounds and beeps.

### To change control from normal sound operation to silent control operation

1. To tell if your range is set for normal or silent operation press and hold **DELAY START**. "---" will appear and "DELAY" will flash in the display. After 6 seconds "bEEP On" or "bEEP OFF" will appear in the display.
2. Press **SELF CLEAN** to switch between normal sound operation and silent operation mode. The display will show either "bEEP On" or "bEEP OFF".

Note: If "bEEP On" appears, the control will operate with normal sounds and beeps. If "bEEP OFF" appears, the control is in the silent operation mode.

3. Press **START** to accept the change or press **CLEAR** to reject the change.

**Note:** The control will always beep at the end of a minute timer and will beep when a set temperature has been reached, even if the control is set to silent operation.

## SETTING MINUTE TIMER

The **TIMER ON-OFF** pad controls the Minute Timer feature. The Minute Timer serves as an extra timer in the kitchen that will beep when the set time has run out. It does not start or stop cooking. The Minute Timer feature can be used during any of the other oven control functions. Refer to "Minimum and Maximum Control Pad Settings" for time amount settings.

### To set the Minute Timer (example for 5 minutes)

1. Press **TIMER ON-OFF**. "---" will appear in the display.
2. Use the number pads to set the desired time in the display; press **5**.
3. Press **START**. The time will begin to count down with "5:00" in the display.

Note: If **START** is not pressed the timer will return to the time of day after 25 seconds.

4. When the set time has run out, "End" will show in the display. The clock will sound with 3 beeps every 5 seconds until **TIMER ON-OFF** is pressed.

### To cancel the Minute Timer before the set time has run out

1. Press **TIMER ON-OFF**. The display will return to the time of day.

## SETTING ADD 1 MINUTE FEATURE

The **ADD 1 MINUTE** pad is used to set the Add 1 Minute feature. When the **ADD 1 MINUTE** pad is pressed, 1 minute is added to the Minute Timer feature if this feature is already active. If the Minute Timer feature is not active and the **ADD 1 MINUTE** pad is pressed, the Minute Timer feature will become active and will begin counting down from 1 minute.

# SETTING OVEN CONTROLS

## QUICK PREHEAT

Use the quick preheat feature when using **single rack baking** to quickly heat the oven to bake temperatures. Use this feature only for standard baking. A reminder tone will sound indicating when to place the food in the oven.

When the oven is finished preheating quick preheat will become just like the bake feature and continue to bake until cancelled.

### To set the quick preheat with an oven temperature of 375°F

1. Arrange the interior oven racks.
2. Press **UPPER** or **LOWER** to select oven.
3. Press **QUICK PREHEAT**. "350" will appear in the display. If a preheat of 350°F is needed, press **START**.
4. Press **3 7 5**.
5. Press **START**. "**PREHEAT**" will be displayed while the oven is preheating.

### NOTE

While in preheat mode, the convection fan (upper oven only) will be activated during the first rise of temperature to allow the oven to reach its target temperature faster. The Bake, Broil and Convection (upper oven only) elements will also cycle for a better heat distribution.

## SETTING BAKE

The **BAKE** pad controls normal baking. If a rapid preheating is preferred, refer to the **QUICK PREHEAT** feature for instructions. The oven can be programmed to bake at any temperature from 170°F to 550°F.

### Baking Tips:

- Preheat your oven before using the bake mode.
- During preheat, the bake, broil elements and the convection fan and element (upper oven only) are used in cycle to quickly heat the oven.
- Use only one rack and center the pans as much as possible on rack 2 or 3.
- If using two racks, place the oven racks in positions 1 and 3.
- Allow 2" to 4" (5,1 to 10,2cm) around the utensil(s) for proper air circulation.
- Be sure the pans do not touch each other, the door, sides or back of the oven.

### To set the Bake Temperature to 375°F

1. Arrange the interior oven racks.
2. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
3. Press **BAKE**, "350" will appear in the display. If a bake of 350°F is needed, press **START**.
4. Press **3 7 5**.
5. Press **START**. The actual temperature will be displayed. A beep will sound once the oven temperature reaches 375°F and the display will show "**375°**".
6. Place food in the oven.

### NOTE

Pressing **CLEAR** will stop the feature at any time.

### To change the Bake Temperature (example: changing from 375°F to 425°F)

1. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
2. After the oven has already been set to bake at 375°F and the oven temperature needs to be changed to 425°F, press **BAKE** and "**375**" will appear in the display.
3. Press **4 2 5**. "**BAKE**" will continue to flash and "**425°**" will appear in the display.
4. Press **START**. The actual temperature will be displayed.

### NOTE

During the first rise of temperature, the convection fan (upper oven only) will be activated to allow the oven to reach its target temperature faster. The Bake, Broil and Convection (upper oven only) elements will also cycle for a better heat distribution.

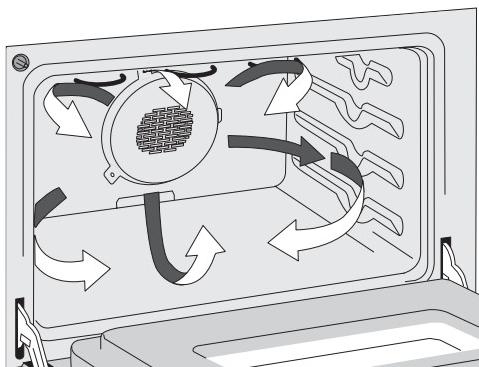

## SETTING OVEN CONTROLS

### SETTING CONVECTION BAKE

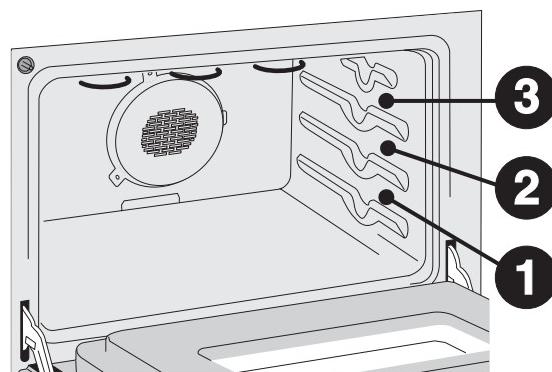

This mode of cooking enables you to obtain the best culinary results when baking with multiple pans and racks. Multiple rack baking may slightly increase cook time for some foods but the overall result is time saved. Some food may cook faster and more evenly with Convection Bake. Convection baking uses the three elements and a fan to circulate the oven's heat evenly and continuously within the oven. The oven can be programmed for Convection baking at any temperature between 170°F to 550°F with a default temperature of 350°F.

#### Convection Baking Tips:

- Always preheat your oven before using the Convection Bake mode.
- During preheat, the 3 elements and the convection fan are used in cycle to quickly heat the oven.
- If your recipe cooking temperature has already been converted for convection baking there is no need to reduce your oven temperature. If your recipe has not had the temperature converted for convection baking you can easily reduce using the Convection Convert feature. Please see Convection Convert section on next page for further instruction on temperature conversion.
- Use tested recipes with times adjusted for convection baking when using this mode. Time reductions will vary depending on the amount and type of food to be cooked.
- When using Convection Bake with a single rack, place oven rack in position 2. If cooking on multiple racks, place the oven racks in positions 1 & 3.
- Most bakeries (except cakes) should be baked on pans with no sides or very low sides to allow heated air to circulate around the food.
- Food baked on pans with a dark finish will cook faster.

Air circulation during Convection Bake  
Figure 1

Oven Rack Positions  
Figure 2

#### To set the oven for Convection Bake and temperature to 375°F

1. Arrange interior oven racks.
2. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
3. Press **CONVECT**. "CONVECT" and "BAKE" will flash and "350" will appear in the display. If a Convection Bake of 350°F is needed, press **START**.
4. Press **3 7 5**. "CONVECT" and "BAKE" will keep flashing and "375°" will appear in the display.
5. Press **START**. The actual oven temperature and the fan icon will be displayed. A beep will sound once the oven temperature reaches 375°F and the display will show "375°", "CONVECT", "BAKE" and the fan icon.
6. Place food in the oven.

#### NOTE

Pressing **CLEAR** will stop the feature at any time.

#### Benefits of Convection Bake:

- Multiple rack baking.
- Some foods cook faster, saving time and energy.
- No special pans or bakeware needed.

#### NOTE

The convection fan will start AS SOON AS the oven is set for Convection Bake. The display will show an icon of rotating fan within a square. This rotating fan icon indicates when the Convection Fan is operating. The Bake, Broil and Convection elements will also cycle for a better heat distribution.

# SETTING OVEN CONTROLS

## SETTING CONVECTION CONVERT

The Convection Convert pad is used to automatically convert a standard baking recipe for convection baking. When set properly, this feature is designed to display the actual converted (reduced) temperature in the display. Convection Convert may ONLY be used with a Convection Bake cooking mode. It can be used with the features Delay Start and Bake Time (see their sections for directions). If convection conversion is used with the Bake and Delay Start features, "CF" (check food) will be displayed when 75% of the bake time complete. At this time the oven control will sound 3 long beeps at regular intervals until baking had finished. When the bake time has completely finished the control will display "End" and will sound 3 long beeps every 30 seconds until the **CLEAR** pad is pressed.

### NOTE

To use this feature with the **BAKE TIME** option, the **BAKE TIME** pad must be pressed before the **CONVECT CONVERT** pad.

### To set the oven for Convection Bake with a standard baking recipe temperature of 400°F:

1. Arrange interior oven racks.
2. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
3. Press **CONVECT**. "**CONVECT**" and "**BAKE**" will flash and "**350**" will appear in the display.
4. Press **4 0 0**. "**CONVECT**" and "**BAKE**" will keep flashing and "**400°**" will appear in the display.
5. Press **CONVECT CONVERT**. As soon as the convection convert pad is pressed, the oven will start heating. The temperature displayed will be 25°F lower than what it used to be. The actual oven temperature and the fan icon will be displayed. A beep will sound once the oven temperature reaches 375°F and the display will show "**375°**", "**CONVECT**", "**BAKE**" and the fan icon.
6. Place food in the oven.

### NOTE

When using a Bake Time under 20 minutes, the Convection Convert will not beep and display the "CF" message.

## SETTING CONVECTION ROAST

This mode is best for cooking tender cuts of beef, lamb, pork and poultry. Use this mode when cooking speed is desired. The Convection Roasting gently browns the exterior and seals in the juices. Convection roasting uses the hidden bake element, the hidden convection element, the broil element and a fan to circulate the oven's heat evenly and continuously within the oven. The oven can be programmed for Convection Roasting at any temperature between 170°F to 550°F with a default temperature of 350°F.

### Convection Roasting Tips:

- Use a broiler pan and grid, and a roasting rack (available by mail order). The broiler pan will catch grease spills and the grid will help prevent spatters. The roasting rack will hold the meat.
- Place an oven rack on rack position 1 (offset rack).
- No preheat is needed in convection roast.
- Make sure the roasting rack is securely seated on the grid in the broiler pan. The roasting rack fits on the grid allowing the heated air to circulate under the food for even cooking and helps to increase browning on the underside (available by mail order only).
- There is no need to reduce the convection temperature or to use the Convection Convert feature with this cooking mode.
- **DO NOT** use the broiler pan without the grid or cover the grid with aluminum foil (available by mail order).
- Always pull the rack out to the stop position before removing food.
- Position food (fat side up) on the roasting rack.

### To set a Convection Roast Temperature of 375°F:

1. Arrange oven racks and place food in the oven.
2. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
3. Press **CONVECT**; "**350**" will be displayed; "**CONVECT**" and "**BAKE**" will flash.
4. Press **CONVECT** again; "**350**" will be displayed; "**CONVECT**" and "**ROAST**" will flash.
5. Enter the desired roasting temperature using the number pads **3 7 5**.
6. Press **START**; The actual oven temperature will be displayed, "**CONVECT**", "**ROAST**" and the fan icon will be displayed. The Bake, Broil and Convection elements will also cycle for a better heat distribution.

### NOTE

Pressing **CLEAR** will stop the feature at any time.

### NOTE

The Bake, Broil and Convection elements will cycle for a better heat distribution.

## SETTING OVEN CONTROLS

### SETTING BAKE TIME

Bake Time allows the oven to be set to cook for a specific length of time and shut off automatically.

The oven will shut off and will beep when the countdown is finished. This feature can be used with Bake, Convection Bake, Convection Roast and Pizza cooking modes.

#### To program the oven to begin baking immediately and to shut off automatically (example: BAKE at 350°F for 30 minutes):

1. Be sure the clock is set for the correct time of day.
2. Arrange interior oven rack(s) and place the food in the oven.
3. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
4. Press **BAKE**, "350" will appear in the display.
5. Press **START**. The actual oven temperature will appear in the display.
6. Press **BAKE TIME**. "---" will appear in the display.
7. Enter the desired baking time by pressing **3 0**.
8. Press **START**. Once the Timed Bake feature has started, the current time of day will appear in the display.

#### NOTE

Baking time can be set for any amount of time between 1 minute to 12 hours. The time remaining can be shown in the timer section of the display by pressing **BAKE TIME** at any moment of the cooking. Once Bake Time has started baking, a beep will sound when the oven temperature reaches the set temperature.

Press **CLEAR** when baking has finished or at any time to cancel the Timed Bake feature. A Bake Time of "0" minute can also be entered to cancel the Bake Time feature and keep the oven in its current cooking mode.

#### When the timed bake finishes:

1. "End" and the time of day will show in display. The oven will shut off automatically.
2. The control will beep 3 times. The control will continue to beep 3 times every 30 seconds until **CLEAR** is pressed.

#### CAUTION

Use caution with the **DELAY START** features. Use the automatic timer when cooking cured or frozen meats and most fruits and vegetables. Foods that can easily spoil such as milk, eggs, fish, meat or poultry, should be chilled in the refrigerator first. Even when chilled, they should not stand in the oven for more than 1 hour before cooking begins, and should be removed promptly when cooking is completed. Eating spoiled food can result in sickness from food poisoning.

### SETTING DELAY START

The **BAKE**, **CONVECT BAKE**, **BAKE TIME** and **DELAY START** pads control the Delayed Time Bake feature. The automatic timer of the Delayed Time Bake will turn the oven **on and off** at the time you select in advance.

#### NOTE

If your clock is set for normal 12 hour display mode the Delayed Timed Bake or Delayed Timed Convection Bake cycle can never be set to start more than 12 hours in advance. To set for Delayed Timed Bake or Delayed Timed Convection Bake 12-24 hours in advance set the control for the 24 hour time of day display mode.

#### To program the oven for a delayed BAKE start time (example: baking at 375°F, starting at 5:30):

1. Be sure that the clock is set with the correct time of day.
2. Arrange interior oven rack and place the food in the oven.
3. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
4. Press **BAKE**. "350" will appear in the display.
5. Enter the desired temperature; pressing **3 7 5**.
6. Press **START**. The actual oven temperature will appear in the display.
7. Press **DELAY START**.
8. Enter the desired start time; pressing **5 3 0**.
9. Press **START**. When Delayed Time Bake starts, the set oven temperature will appear, "DELAY", "BAKE" and the current time of day will appear in the display.

#### NOTE

If it is desired to have the oven shut off automatically after a set time; enter a **BAKE TIME** at this step.

10. When the desired start time is reached, the actual oven temperature appears in display and "DELAY" disappears. Oven starts to bake at the previously selected temperature.

Press **CLEAR** when baking has completed or at any time to cancel the Delayed Time Bake feature.

# SETTING OVEN CONTROLS

## SETTING BROIL

This mode is best for meats, fish and poultry up to 1" thick. Broiling is a method of cooking tender cuts of meat by direct heat under the broil element of the oven. The high heat cooks quickly and gives a rich, brown outer appearance. The **BROIL** pad controls the Broil feature. An optional Searing Grill, Broiler Pan and Insert are available via the enclosed accessories brochure (Figure 2 & 3). The optional broil pan and broil pan insert used together allow dripping grease to drain and be kept away from the high heat of the oven broiler. The oven can be programmed to broil at any temperature from 400°F to 550°F with a default temperature of 550°F.

### Broiling Tips:

- For optimum browning, preheat the broil element for 5 minutes.
- Broil one side until the food is browned; turn and cook on the second side. Season and serve.
- Always pull the rack out to the "stop" position before turning or removing food.
- Always use the broiler pan and its cover when broiling. It allows the dripping grease to be kept away from the high heat of the broil element (see Figure 2).
- For best broiling results, broil with the oven door in the broil stop position (see Figure 1).
- If using a Searing Grill (available by mail order), preheat the grill for 5 to 10 minutes before placing your meat.
- **DO NOT** use the broil pan without the insert. **DO NOT cover the broil pan insert with foil.** The exposed grease could catch fire.

Accessories available via the enclosed brochure:

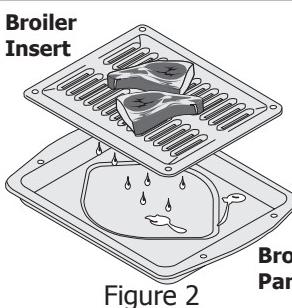

Figure 2

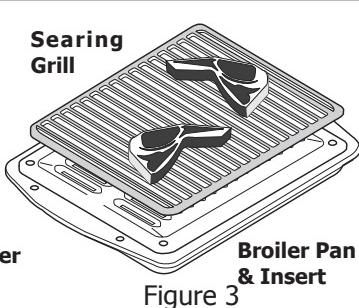

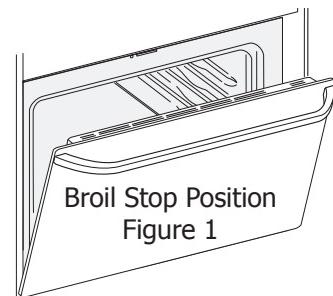

Figure 3

### To set a Broil of 500°F:

1. Place the broiler pan insert on the broiler pan. Then place the food on the broiler pan insert. **DO NOT** use the broiler pan without the insert. **DO NOT** cover the broiler insert with foil. The exposed grease could ignite.
2. Arrange the interior oven rack and place the broiler pan on the rack. Be sure to center the broiler pan directly under the broiler element. **Make sure the oven door is in the broil stop position (See Figure 1).**
3. Preheat for 5 minutes before broiling.
4. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
5. Press **BROIL**. **"550"** will appear in the display.
6. Press **5 0 0**. If a lower broil temperature is desired (minimum broil temperature setting is 400°F), press the desired temperature before continuing to step 7.
7. Press **START**. The oven will begin to broil. **"500°"** will appear in the display.
8. Broil on one side until food is browned; turn and cook on the second side. Season and serve.

**Note:** Always pull the rack out to the stop position before turning or removing food.

Broil Stop Position  
Figure 1

### WARNING

Should an oven fire occur, leave the oven door closed and turn off the oven. If the fire continues, throw baking soda on the fire or use a fire extinguisher. **DO NOT** put water or flour on the fire. Flour may be explosive and water can cause a grease fire to spread and cause personal injury.

## Electric Oven Broiling Table Recommendations

Food Item	Upper Oven Rack Position	Lower Oven Rack Position	Temperature Setting	Cook Time		Doneness
				1st side	2nd side	
Steak 1" thick	3rd	3rd	550° F	6:00	4:00	Rare
	3rd	3rd	550° F	7:00	5:00	Medium
Pork Chops 3/4" thick	3rd	3rd	550° F	8:00	6:00	Well
Chicken - Bone In	2nd	2nd	450° F	20:00	10:00	Well
Chicken - Boneless	3rd	3rd	450° F	8:00	6:00	Well
Fish	2nd	2nd	500° F	13:00	-	Well
Shrimp	2nd	2nd	550° F	5:00	-	Well
Hamburger 1" thick	3rd	3rd	550° F	9:00	7:00	Medium
	3rd	3rd	550° F	10:00	8:00	Well

## SETTING OVEN CONTROLS

### SETTING SLOW COOK

The **SLOW COOK** feature may be used to cook foods more slowly at lower temperatures. Slow Cook provides cooking results much the same way as a slow cooker or a Crock-Po.

This feature is ideal for roasting beef, pork & Poultry. Slow cooking meats may result in the exterior of meats becoming dark but not burnt; this is normal.

Slow Cook may be set with the following options: Cook Time & Cook Time and/or Delay Start.

For Slow Cook two settings are available, high (Hi) or low (Lo). The high setting is best for cooking foods from a 4 to 5 hour time period. The low setting is best for cooking foods from a 8 to 9 hour time period.

#### Slow Cook Tips:

- Completely thaw all frozen foods before cooking.
- Position multiple racks to accommodate size of cooking utensils when cooking multiple food item.
- Add any cream or cheese sauces during the last hour of cooking.
- Do not open the oven door often or leave the door open when checking foods. The more heat that is lost, the longer the food will need to cook.
- Cover the foods to keep them moist or use a loose or vented type cover to allow foods to turn crisp or brown.
- Roast may be left uncovered so browning can occur. Cook Times will vary depending on the weight, fat content, bone & the shape of the roast.
- Preheating the oven will not be necessary.
- Use the recipe's recommended food temperature and a food thermometer to determine when the food is done.

#### To set a Slow Cook:

1. Arrange interior oven racks.
2. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
3. Press **SLOW COOK** to choose the Hi option.
4. Press **SLOW COOK** again to choose the Lo option.
5. Press **START**.

#### NOTE

You may press STOP any time when setting the control or during the cooking process.

### SETTING PIZZA

The **PIZZA** pad has been designed to give optimum cooking performance when cooking your favorite pizza. The Pizza pad let you choose a preset between a frozen pizza (425°F) and a fresh pizza (400°F). If needed, a different target temperature than the presets can be entered. Some fresh pizza request using a broil feature for a few minutes, but this is not part of the Pizza pad presets.

#### Pizza Tips:

- Follow the instructions on the box for preheating and baking times.
- For optimum cooking results, only bake one pizza at once on rack position 2.
- Check the pizza at 75% of the maximum cook time listed on the package.

#### To set Pizza for a frozen pizza:

1. Arrange interior oven racks.
2. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
3. Press **PIZZA** pad. "Fro" will appear in the display. If a different temperature than 425°F is needed, enter the temperature now, using the keypad digits.
4. Press **START**. The fan icon and the actual oven temperature will appear in the display.
5. Place the pizza in the oven when the beep is heard.
6. If needed, enter a **BAKE TIME** (see its section for further details).
7. To turn OFF the Pizza feature at any time press **CLEAR**.

#### To set Pizza for a fresh pizza:

1. Arrange interior oven racks.
2. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
3. Press **PIZZA** pad twice. "Frh" will appear in the display. If a different temperature than 400°F is needed, enter the temperature now, using the keypad digits.
4. Press **START**. The fan icon and the actual oven temperature will appear in the display.
5. Place the pizza in the oven when the beep is heard.
6. If needed, enter a **BAKE TIME** (see its section for further details).
7. To turn OFF the Pizza feature at any time press **CLEAR**.

# SETTING OVEN CONTROLS

## SETTING KEEP WARM

This mode is best for keeping oven baked foods warm for serving after cooking has finished. The **KEEP WARM** pad turns ON the Keep Warm feature and will maintain an oven temperature of 170°F (77°C). The Keep Warm feature will keep oven baked foods warm for serving up to 3 hours after cooking has finished. **After 3 hours the Keep Warm feature will shut the oven OFF.**

The Keep Warm feature may be used without any other cooking operations or can be set to turn ON automatically after a **BAKE TIME** or **DELAYED BAKE TIME**.

### Keep Warm Tips:

- Always start with hot food.
- Do not use the Keep Warm feature to heat cold food.
- Food in heat-safe glass and glass ceramic containers may need higher temperature settings compared to food in regular containers.
- Avoid repeated openings of the oven, it will allow hot air to escape and the food to cool.
- Aluminum foil may be used to cover food to increase moisture content.

### To set Keep Warm:

1. Arrange interior oven racks and place food in oven.
2. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
3. Press **KEEP WARM**. "HLd" will appear in the display. Note: If no pad is touched within 25 seconds the request to turn ON Keep Warm feature will be cancelled.
4. Press **START**. The oven icon will appear in the display.
5. To turn OFF the KEEP WARM at any time press **CLEAR**.

### To set Keep Warm to turn ON automatically:

1. Arrange interior oven racks and place food in oven. Set the oven properly for **Bake Time or Delayed Bake Time**. (See their respective sections for more details).
2. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
3. Press **KEEP WARM**. "HLd" will appear in the display. Note: If no pad is touched within 25 seconds the cooking will be cancelled.
4. Press **START**. "HLd" will disappear and the temperature will be displayed. The Keep Warm mode is set to turn ON automatically after Timed Bake has finished. "HLd" will re-appear when the Timed Bake has finished.
5. To turn the Keep Warm feature OFF at any time press **CLEAR**.

### NOTE

Pressing **CLEAR** will stop the feature at any time.

## SETTING OVEN CONTROLS

### USING AND SETTING MEAT PROBE (UPPER OVEN ONLY)

Checking the internal temperature of your food is the most effective way of insuring that your food has been properly cooked. When cooking meat such as roasts, hams or poultry you can use the meat probe to check the internal temperature without any guesswork. For some foods, especially poultry and roasts, testing the internal temperature is the best method to insure properly cooked meats.

#### Important things to consider:

- Use only the probe supplied with your appliance; any other may result in damage to the probe or the appliance.
- Handle the probe carefully when inserting and removing from the food or the receptacle.
- Do not use tongs to pull the cable when inserting or removing from the food or the receptacle.
- Defrost your food completely before inserting the probe to avoid damaging probe.
- Never leave or store the probe inside the oven when not in use.
- To prevent the possibility of burns, after cooking carefully unplug the probe using a pot holder.

#### Proper Meat Probe placement:

- Always insert the probe so that the tip rests in the center of the thickest part of the meat. Do not allow the probe to touch bone, fat, gristle or the pan.
- For bone-in ham or lamb, insert the probe into the center of the lowest large muscle or joint. For dishes such as meat loaf or casseroles, insert the probe into the center of the food. To find the center of the food visually measure with the probe (See Fig. 1). When cooking fish, insert the probe just above the gill.
- For whole poultry or turkey, insert the probe into the thickest part of the inner thigh, below the leg (See Fig. 2).

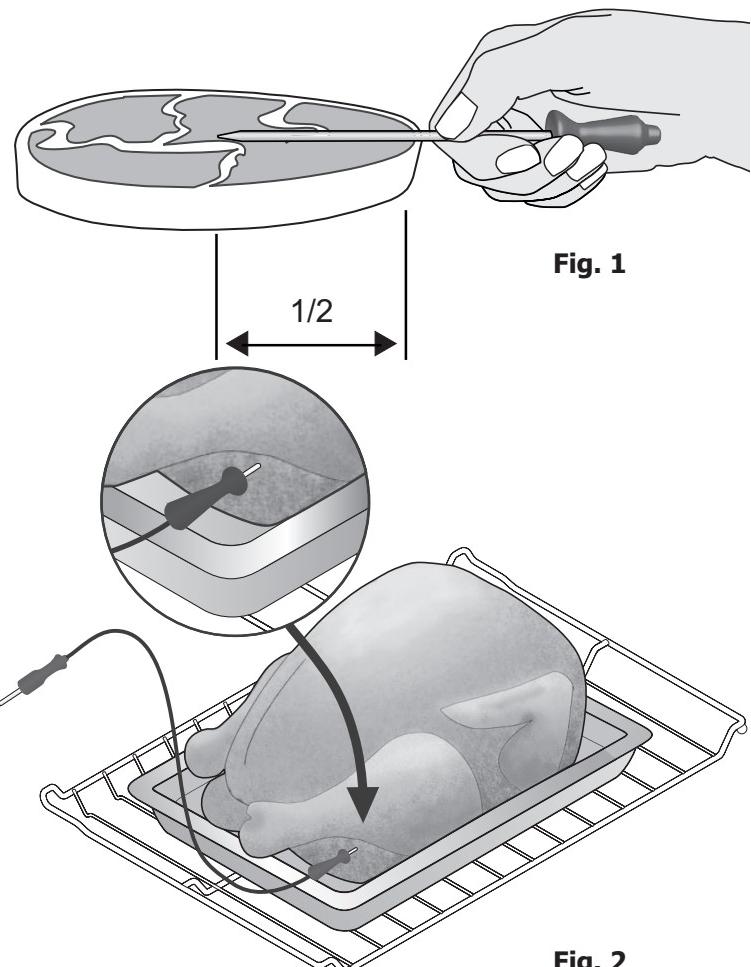

Fig. 1

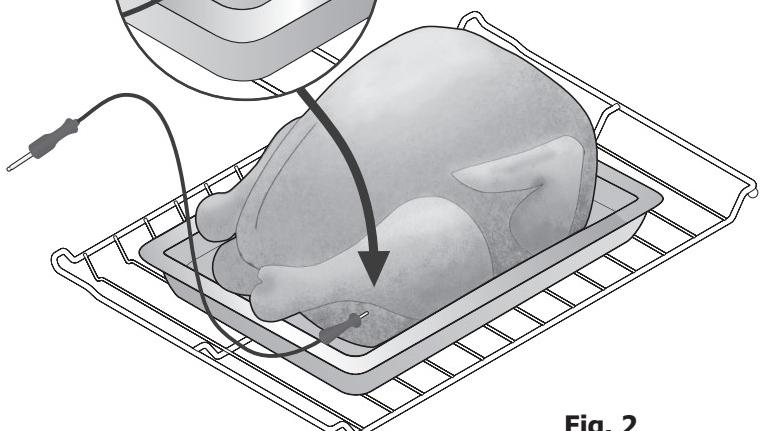

Fig. 2

#### USDA Minimum Recommended Internal Food Temperature

Fish	Beef, Veal, Lamb Steaks & Roasts	Pork
145°F 63°C	145°F 63°C	160°F 71°C
Egg Dishes	Beef, Veal, Lamb Ground	Turkey, Chicken & Duck Whole, Pieces & Ground
160°F 71°C	160°F 71°C	165°F 74°C

For more informations, visit: [www.isitdonyet.gov](http://www.isitdonyet.gov)

# SETTING OVEN CONTROLS

## USING AND SETTING MEAT PROBE (UPPER OVEN ONLY)

### To use the meat probe:

1. Prepare the food and properly insert the temperature probe into the food. DO NOT PREHEAT or start cooking before properly inserting the meat probe. The probe should be inserted into the food and receptacle while the oven is still cool.
2. Place the prepared food on the desired oven rack position and slide into the oven.
3. Plug the meat probe into the probe receptacle located on the left front oven cavity side.
4. Close the oven door.
5. The oven control will detect if the meat probe is correctly plugged in and will illuminate with  icon in the display.
6. The actual meat probe temperature will appear in the display.
7. To set the target temperature press **MEAT PROBE** pad once then enter the desired the desired target internal temperature using the numeric key pads (default setting is 170°F/77°C)\*. Press **START** to accept the meat probe target temperature.
8. Set the oven control for **CONV ROAST**, **CONV BAKE** or **BAKE** and the desired oven temperature. You may use the meat probe with some other baking features but cannot be set with Broil or Flex-Clean.
9. During the cooking process you may check the actual internal temperature by pressing the **MEAT PROBE** key once. The actual temperature will display. After 8 seconds the display will return to the actual oven temperature.
10. If the target temperature needs to be changed during the cooking process, press **MEAT PROBE** twice and use the numeric keypads to adjust the target temperature. Press the **START** key to accept the change.

\* The U.S. Department of Agriculture states, "Rare fresh beef is popular, but you should know that cooking it to only 140°F/60°C means some food poisoning organisms may survive." (Source: Safe Food Book, Your Kitchen Guide, USDA Rev. June 1985.)

The lowest temperature recommended by the USDA is 145°F/63°C for medium rare fresh beef.

### Setting the oven to automatically stop cooking after reaching meat probe target temperature:

The oven leaves the factory preset to alert you when the internal target temperature has been reached but to continue cooking at the oven set temperature. You may desire to change how your oven reacts when using the meat probe.

Note: Changing how the meat probe reacts must be done before starting the cooking process.

1. To set oven to shut-off automatically after reaching the Meat Probe target temperature press **MEAT PROBE** and hold for 7 seconds then use the **SELF CLEAN** key toggle to the message P CC (Probe, cancel cooking) then press **START** to accept.
2. Use the **SELF CLEAN** key to toggle back to PnCC (Probe, no cancel cooking) and then press **START** to accept if you wish for the oven to continue cooking after the meat probe reaches the target temperature.

## SETTING OVEN CONTROLS

### SETTING MY FAVORITE

The My Favorite setting allow you to save your most frequently used or most complex cooking sequence. This feature will save the cooking mode, the target temperature and the bake time (if any). The oven can recall a cooking sequences from its internal memory, which is easily accessible from a one touch button. This function can be used with Bake, Convection Bake, Convection Roast and Preheat.

#### To save a Favorite (example is a 450°F Bake for 30 minutes):

1. Arrange interior oven racks and place food in oven.
2. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
3. Press **BAKE**. The default temperature will appear in the display.
4. Enter temperature needed; **4 5 0**.
5. Press **START**.
6. Press **BAKE TIME**.
7. Enter time needed; **3 0**.
8. Press **START**.
9. Press and hold for 3 seconds **MY FAVORITE** pad. The  icon will be shown to confirm your setting has been saved.

#### To recall a Favorite:

1. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
2. Press **MY FAVORITE** pad.
3. Press **START**.

#### NOTE

Recalling a Favorite can only be done when the oven is not currently in operation.

#### To overwrite a Favorite:

1. To overwrite My Favorite simply start a new cooking sequence and save it as shown in example above. The new My Favorite settings will overwrite the old ones.

#### To delete a Favorite:

1. Press the **MY FAVORITE** pad to delete for **3 seconds** while the oven is not in operation and no cooking mode has been set.

#### NOTE

A My Favorite setting can be set individually for each oven.

# SETTING OVEN CONTROLS

## SETTING THE SABBATH FEATURE (for use on the Jewish Sabbath & Holidays)

The **BAKE TIME** and **DELAY START** pads are used to set the Sabbath feature. The Sabbath feature may only be used with the **BAKE** pad. The oven temperature may be set higher or lower after setting the Sabbath feature (the oven temperature adjustment feature should be used only during Jewish Holidays), however the display will not visibly show or provide any audible tones indicating whether the change occurred correctly. Once the oven is properly set using Bake with the Sabbath feature active, the oven will remain continuously ON until cancelled. This will override the factory preset 6-Hour Energy Saving feature.

If the oven light will be needed during the Sabbath, press **OVEN LIGHT**  before activating the Sabbath feature. Once the oven light is turned ON and the Sabbath feature is active, the oven light will remain ON until the Sabbath feature is turned OFF. If the oven light needs to be OFF, be sure to turn the oven light OFF before activating the Sabbath feature.

### To Program the Oven to Begin Baking Immediately & activate the Sabbath feature (example: baking at 350°F)

1. Be sure that the clock is set with the correct time of day.
2. Place the food in the oven.
3. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
4. Press **BAKE**. "350°" appears in the display.
5. Press **START**. The actual oven temperature appears in the display.
6. If you desire to set the oven control for a **Bake Time** or **Delayed Bake Time** do so at this time. If not, skip this step and continue to step 8. Refer to the **Bake Time / Delay Start** section for complete instructions. Remember the oven will shut down after using **Bake Time** or **Delay Start** and therefore may only be used once during the Sabbath/Jewish Holidays. The maximum **Delayed Start Bake** time is 11 hours & 59 minutes.
7. The oven will turn ON and begin heating.
8. Press and hold both the **BAKE TIME** and **DELAY START** pads for at least **3 seconds**. "**SAb**" will appear in the display. Once "**SAb**" appears in the display the oven control will no longer beep or display any further changes and the oven is properly set for the Sabbath feature.
9. The oven may be turned OFF at any time by first pressing **CLEAR** pad (this will turn the oven OFF only). To turn OFF the Sabbath feature press and hold both the **BAKE TIME** and **DELAY START** pads for at least **3 seconds**. "**SAb**" will disappear from the display.

## IMPORTANT

It is not advised to attempt to activate any other program feature other than **BAKE** while the Sabbath feature is active. ONLY the following key pads will function after setting the Sabbath feature; **0** to **9**, **BAKE**, **START** & **CLEAR**. **All other keypads** should not be used once the Sabbath feature is properly activated.

## NOTE

You may change the oven temperature once baking has started by pressing **BAKE**, the numeric key pads for the temperature you want (example for 425°C press **4 2 5**) and then pressing **START twice** (for Jewish Holidays only). Remember that **the oven control will no longer beep or display any further changes** once the oven is set for the Sabbath feature.

Should you experience a power failure or interruption, the oven will shut off. When power is returned, "**SF**" (Sabbath Failure) will be shown in the oven display and the cooktop displays. The oven and cooktop will not turn back on automatically. If your food was nearly fully cooked, you may allow the trapped heat in the oven to finish the cooking process. Otherwise, you should remove the food when the power failure occurs, because you may only start the oven once during the Sabbath/Jewish Holidays. After the Sabbath observance turn OFF the Sabbath feature and the oven may be used with all normal functions.

After the Sabbath observance turn OFF the Sabbath feature. Press and hold both the **BAKE TIME** and **DELAY** pads for at least **3 seconds**. "**SAb**" will disappear from the display and the oven may be used with all normal functions. For further assistance, guidelines for proper usage, and a complete list of models with the Sabbath feature, please visit the web at <http://www.star-k.org>.

## How the Electronic Surface Element Controls work when the Sabbath feature is ON.

When your Oven Sabbath feature is ON, the Electronic Surface Elements are also in Sabbath mode. This means that all electronic surface element control displays show "**Sb**". The surface elements can be used even if the Sabbath Feature is on.

### To turn ON a Surface Element when the Oven Sabbath Feature is active:

If you turn on a surface element when the oven Sabbath feature is on, the electronic surface element control will record that request and execute it with a 15-30 seconds delay. So the element will start heating 15-30 seconds after the surface element control was turned on. As the oven control, the surface element display will not show the setting because "**Sb**" is on in the displays. When necessary, it is possible to adjust the power of the surface element but you have to remember that the surface element control will adjust the temperature with the same delay.

### To turn OFF the Surface Element when the Oven Sabbath Mode is active:

To shut off the surface element while the Sabbath feature is ON, proceed as usual but take note that the element will immediately turn off without any delay.

## SETTING OVEN CONTROLS

### ADJUSTING OVEN TEMPERATURE

The temperature in the oven has been pre-set at the factory. When first using the oven, be sure to follow recipe times and temperatures. If you think the oven is cooking too hot or too cool for the temperature you select, you can adjust the actual oven temperature to be more or less than what is displayed. Before adjusting, test a recipe by using a temperature setting that is higher or lower than the recommended temperature. The baking results should help you to decide how much of an adjustment is needed.

#### To adjust the oven temperature higher

1. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
2. Press **BAKE** for 6 seconds. "**UPO 00**" will appear in the display.
3. To increase the temperature use the number pads to enter the desired change (Example 30°F) **3 0**. The temperature may be increased as much as 35°F (19°C).
4. Press **START** to accept the temperature change and the display will return to the time of day. Press **CLEAR** to reject the change if necessary.

#### To adjust the oven temperature lower

1. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
2. Press **BAKE** for 6 seconds. **0°** will appear in the display.
3. To decrease the temperature use the number pads to enter the desired change (Example -30°F) **3 0** and then press **SELF CLEAN**. The temperature may be decreased as much as 35°F (19°C).
4. Press **START** to accept the temperature change and the display will return to the time of day. Press **CLEAR** to reject the change if necessary.

### NOTE

- Each oven temperature can be individually adjusted.
- The oven temperature adjustments made with this feature will not change the Self-Clean cycle temperature or the Broil temperature.
- The oven temperature adjustments are permanent and will stay forever in the unit memory unless you manually change it again. Even a power outage will not reset these changes. Follow the same procedure again if you wish to change it to a different setting.

### OVEN LIGHT

Each oven is equipped with an oven light. The oven light will turn on automatically, when the oven door is opened.

The oven light may be turned on when the door is closed by using the oven light pad located on the control panel. The oven light key will toggle the lights at full intensity.

#### To toggle the Oven Lights ON and OFF:

1. Press **UPPER OVEN** or **LOWER OVEN** to select oven.
2. Press **OVEN LIGHT** .

The interior oven lights are covered with a glass shield held by a wire holder. The glass shield must be in place whenever the oven is in use.

To change the interior oven lights, see "Changing the oven light" in the **Care & Cleaning** section.

# SELF-CLEANING

## SELF-CLEANING

A self-cleaning oven cleans itself with high temperatures (well above normal cooking temperatures) which eliminate soils completely or reduces them to a fine powdered ash you can wipe away with a damp cloth.

### ► IMPORTANT

#### Adhere to the following cleaning precautions:

- **DO NOT** use oven cleaners or oven protective coatings in or around any part of the oven interior.
- **DO NOT** clean the oven door gasket. The woven material of the oven door gasket is essential for a good seal. Care should be taken not to rub, damage or remove the gasket.
- **DO NOT** use any cleaning materials on the oven door gasket. Doing so could cause damage.
- **Remove the broiler pan and insert, all utensils and ANY ALUMINUM FOIL. These items cannot withstand high cleaning temperatures and will melt.**
- **Completely remove ALL OVEN RACKS and ANY ACCESSORIES. If the oven racks are not removed, they will lose their special coating properties and will no longer slide in and out of the oven cavity effortlessly.**
- **Remove any excessive spillovers** in the oven cavity **before** starting the Self-Cleaning cycle. To clean, use hot, soapy water and a cloth. Large spillovers can cause heavy smoke or fire when subjected to high temperatures. **DO NOT** allow food spills with a high sugar or acid content (such as milk, tomatoes, sauerkraut, fruit juices or pie filling) to remain on the surface as they may leave a dull spot even after cleaning.
- Clean any soil from the oven frame, the door liner outside the oven door gasket and the small area at the front center of the oven bottom. These areas heat sufficiently to burn soil on. Clean with soap and water.

## What to Expect during Cleaning

While the oven is in operation, the oven heats to temperatures much higher than those used in normal cooking. Sounds of metal expansion and contraction are normal. Odor is also normal as the food soil is being removed. Smoke may appear through the oven vent.

If heavy spillovers are not wiped up before cleaning, they may flame and cause more smoke and odor than usual. This is normal and safe and should not cause alarm. If available, use an exhaust fan during the self-cleaning cycle.

### ! CAUTION

To avoid possible burns use care when opening the oven door after the Self-Cleaning cycle. Stand to the side of the oven when opening the door to allow hot air or steam to escape.

During the Self-Cleaning cycle, the outside of the range can become very hot to the touch. **DO NOT** leave small children unattended near the appliance.

The health of some birds is extremely sensitive to the fumes given off during the Self-Cleaning cycle of any range. Move birds to another well-ventilated room.

**DO NOT** line the oven walls, racks, bottom or any other part of the range with **aluminum foil**. Doing so will destroy heat distribution, produce poor baking results and cause permanent damage to the oven interior (aluminum foil will melt to the interior surface of the oven).

**DO NOT** force the oven door open. This can damage the automatic door locking system. Use caution when opening the door after the Self-Cleaning cycle is completed. The oven may still be **VERY HOT**.

### ► NOTE

See additional cleaning information for the oven door in the **General Care & Cleaning** section.

## SETTING SELF-CLEAN CYCLE TIME LENGTH

The **SELF CLEAN** pad controls the Self-Cleaning feature. If you are planning to use the oven directly after a self-clean cycle remember to allow time for the oven to cool down and the oven door to unlock. This normally takes about one hour. So a 3 hour self-clean cycle will actually take about 4 hours to complete.

\*It is recommended to use a 2 hour self-clean cycle for **light soils**, a 3 hour cycle for **average soils**, and a 4 hour cycle for **heavy soils** (to assure satisfactory results).

### To set the controls for a 3 hour Self-Cleaning cycle to start immediately and shut off automatically

1. Be sure the clock is set with the correct time of day and the oven door is closed.
2. Press **UPPER** or **LOWER** to select oven.
3. Press **SELF CLEAN**. "3:00" and **CLn** will show in the display. The control will automatically clean for a 3 hour period (default self-cleaning cycle time). For the first 10 seconds, "**Remove Racks**" will flash and beep to remind you that the racks need to be removed.

#### NOTE

If a 2 or 4 hour clean time is desired, press **SELF CLEAN** multiple times to toggle between 2, 3 or 4 hours.

4. Press **START**. The "**DOOR**" icon will flash.
5. As soon as the control is set, the motor driven oven door lock will begin to close automatically. Once the door has been locked the "**DOOR**" indicator light will stop flashing and remain on and the  icon will appear. Also, the oven icon will appear in the display.

#### NOTE

Allow about 15 seconds for the oven door lock to close.

### When the Self-Clean Cycle is Completed

1. "**HOT**" will appear in the display. The time of day, the "**DOOR**" and  icon will remain in the display.
2. Once the oven has cooled down for approximately 1 HOUR, and the "**DOOR**" is no longer displayed, the oven door can then be opened.

### Stopping or Interrupting a Self-Cleaning Cycle

If it becomes necessary to stop or interrupt a self-cleaning cycle due to excessive smoke or fire in the oven:

1. Press **CLEAR**.
2. The oven door can only be opened after the oven has cooled down for approximately 1 HOUR and the "**DOOR**" and  icons are no longer displayed.

The **SELF CLEAN** and **DELAY START** pads controls the Delayed Self-Clean operation. The automatic timer will turn the oven **on and off** at the time you select in advance.

### To set the control for the Self-Cleaning Cycle to start at a delayed time and shut off automatically (example: 3 hour self-clean cycle to start at 4:30)

1. Be sure the clock is set with the correct time of day and the oven door is closed.
2. Press **UPPER** or **LOWER** to select oven.
3. Press **SELF CLEAN**. "3:00" and **CLn** will show in the display. The control will automatically clean for a 3 hour period. For the first 10 seconds, "**Remove Racks**" will flash and beep to remind you that the racks need to be removed.

#### NOTE

If a 2 or 4 hour clean time is desired, press **SELF CLEAN** multiple times to toggle between 2, 3 or 4 hours.

4. Press **START**. The "**DOOR**" icon will flash.
5. As soon as the control is set, the motor driven oven door lock will begin to close automatically. Once the door has been locked the "**DOOR**" indicator light will quit flashing and remain on and the  icon will appear.
6. Press **DELAY START**. Enter the desired start time using the number pads **4 3 0**.
7. Press **START**. "**DELAY**", "**DOOR LOCKED**" and "**CLEAN**" icons will remain on.
8. The control will start the self-cleaning at the set start time, for the period of time previously selected. At that time, the icon "**DELAY**" will go out; "**CLn**" and oven icon will appear in the display.

### When the Self-Clean Cycle is Completed

1. "**HOT**" will appear in the display. The time of day, the "**DOOR**" and  icon will remain in the display.
2. Once the oven has cooled down for approximately 1 HOUR, and the "**DOOR**" is no longer displayed, the oven door can then be opened.

### Stopping or Interrupting a Self-Cleaning Cycle

If it becomes necessary to stop or interrupt a self-cleaning cycle due to excessive smoke or fire in the oven:

1. Press **CLEAR**.
2. The oven door can only be opened after the oven has cooled down for approximately 1 HOUR and the "**DOOR**" and  icons are no longer displayed.

#### NOTE

The surface elements and the 2nd oven cannot be activated when the Self-Clean feature is active (see the section: **The electronic surface element control (ESEC)**).

## CARE & CLEANING (Cleaning Chart)

### CLEANING VARIOUS PARTS OF YOUR APPLIANCE

Before cleaning any part of the appliance, be sure all controls are turned off and the appliance is COOL. REMOVE SPILLOVERS AND HEAVY SOILING AS SOON AS POSSIBLE. REGULAR CLEANING WILL REDUCE THE NUMBER OF MAJOR CLEANING LATER.

Surfaces	How to Clean
Aluminum (trim pieces) & Vinyl	Use hot, soapy water and a cloth. Dry with a clean cloth.
Glass, Painted and Plastic Body Parts, Control Knobs & Decorative Trim Pieces	Using a soft cloth, clean with mild dish detergent and water or a 50/50 solution of vinegar and water. Follow by rinsing the area with clean water; dry and polish with a soft cloth. Glass cleaners may be used if sprayed on a soft cloth first. DO NOT spray liquids directly on the control pad and display area. Do not use large amounts of water on the control panel - excess water on the control area may cause damage to the appliance. Do not use other liquid cleaners, abrasive cleaners, scouring pads, or paper towels - they will damage the finish. To remove control knobs, turn to the OFF position; grasp firmly and pull straight off the shaft. To replace knobs after cleaning, line up the flat sides of both the knob and the shaft; then push the knob into place.
Control Panels	Before cleaning the control panel, turn all controls to OFF and remove the control knobs. To remove, pull each knob straight off the shaft. Clean as instructed above. Squeeze excess water from the cloth before wiping the panel; especially when wiping around the controls. Excess water in or around the controls may cause damage to the appliance. To replace knobs after cleaning, line up the flat sides of both the knob and the shaft; then push the knob into place.
Porcelain Enamel Burner Grates, Cooktop Surface, Below Cooktop, Broiler Pan & Insert (some models), Door Liner, Oven Bottom & Burner Drip Pans	Clean burner grates, broiler pan and insert (some models) in the dishwasher and dry upon removal. If soils are not removed, follow the cooktop cleaning instructions below. Gentle scouring with a soapy scouring pad will remove most spots. Rinse with a 1:1 solution of clear water and ammonia. If necessary, cover difficult spots with an ammonia-soaked paper towel for 30 to 40 minutes. Rinse with clean water and a damp cloth, then scrub with a soap-filled scouring pad. Rinse and wipe dry with a clean cloth. Remove all cleaners or the porcelain may become damaged during future heating. DO NOT use spray oven cleaners on the cooktop.
Easy Care™ Stainless Steel Oven Door and Decorative Trim	Your range finish is made with Easy Care™ Stainless Steel. Clean the stainless with warm soapy water using a clean sponge or cloth. Rinse with clean water and dry with a soft clean cloth. DO NOT use ANY store bought cleaners like Stainless Steel cleaners or any other types of cleaners containing any abrasive, chlorides, chlorines or ammonia. It is recommended to use mild dish soap and water or a 50/50 solution of water and vinegar.
Oven Racks	Remove racks. See "To remove and to replace an oven rack" under Oven vent(s) and racks. Use a mild, abrasive cleaner, following manufacturer's instructions. Rinse with clean water and dry. After cleaning the racks, rub the sides of the racks with wax paper or a cloth containing a small amount of baby oil or salad oil (this will make the racks glide easier into the rack positions).
Oven Door	 <p>Use soap &amp; water to thoroughly clean the top, sides and front of the oven door. Rinse well. You may use a glass cleaner on the outside glass of the oven door. DO NOT immerse the door in water. DO NOT spray or allow water or the glass cleaner to enter the door vents. DO NOT use oven cleaners, cleaning powders or any harsh abrasive cleaning materials on the outside of the oven door.</p> <p>DO NOT clean the oven door gasket. The oven door gasket is made of a woven material, on Self-Cleaning models, which is essential for a good seal. Care should be taken not to rub, damage or remove this gasket.</p>

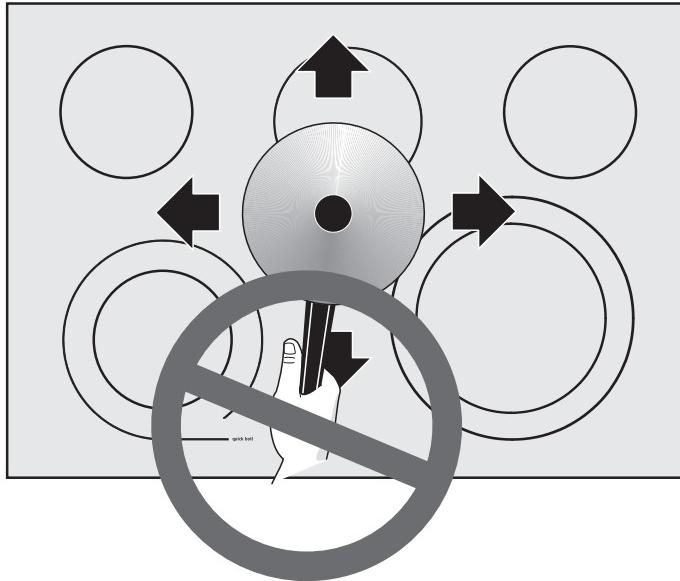

## CERAMIC GLASS COOKTOP CLEANING & MAINTENANCE

**Consistent and proper cleaning is essential to maintaining your Ceramic glass cooktop.**

Prior to using your cooktop for the first time, apply the recommended CERAMA BRYTE® Cleaning Creme to the ceramic surface. Clean and buff with a non abrasive cloth or pad. This will make cleaning easier when soiled from cooking. The special cooktop cleaning cream leaves a protective finish on the glass to help prevent scratches and abrasions.

Sliding aluminum or copper clad bottom pans on the cooktop can cause metal markings on the cooktop surface. These marks should be removed **immediately** after the cooktop has cooled using the cooktop cleaning cream. Metal marks can become permanent if not removed prior to future use.

Cookware (cast iron, metal, ceramic or glass) with rough bottoms can mark or scratch the cooktop surface. **Do not slide anything metal or glass** across the cooktop. **Do not** use your cooktop as a cutting board or work surface in the kitchen. **Do not** cook foods directly on the cooktop surface without a pan. **Do not** drop heavy or hard objects on the glass cooktop, or they may crack it.

## CLEANING RECOMMENDATIONS FOR THE CERAMIC GLASS COOKTOP

### ⚠ CAUTION

Before cleaning the cooktop, be sure the controls are turned to **OFF** and the cooktop is **COOL**.

### ⚠ WARNING

**DO NOT** use a cooktop cleaner on a hot cooktop. The fumes can be hazardous to your health, and can chemically damage the ceramic glass surface.

#### For light to moderate soil:

Apply a few drops of CookTop® Cleaning Creme directly to the cooktop. Use a paper towel or use a **non-abrasive** plastic type **no-scratch** pad to clean the entire cooktop surface. Make sure the cooktop is cleaned thoroughly, leaving no residue.

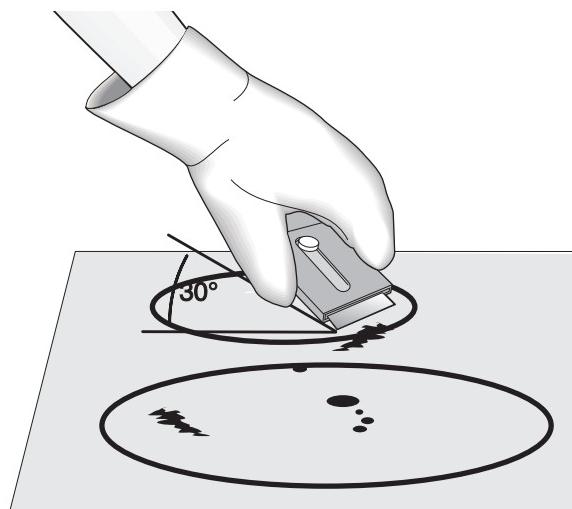

#### For heavy, burned on soil:

Apply a few drops of CookTop® Cleaning Creme directly to the soiled area. Rub the soiled area using a **non-abrasive** plastic type **no-scratch** pad, applying pressure as needed. Do not use the pad you use to clean the cooktop for any other purpose.

### ➡ IMPORTANT

Damage to the ceramic glass cooktop may occur if you use an abrasive type scratch pad. Only use cleaning products that have been specifically designed for ceramic glass cooktop.

If soils remain, carefully scrape soils with a metal razor blade scraper, holding scraper at a 30 degree angle to the surface. Remove loosened soils, then apply a few drops of cleaning cream and buff surface clean.

## CARE & CLEANING

### CLEANING RECOMMENDATIONS FOR THE CERAMIC GLASS COOKTOP (CONTINUED)

#### Plastic or foods with a high sugar content:

These types of soils need be removed immediately if spilled or melted onto the ceramic cooktop surface. Permanent damage (such as pitting of the cooktop surface) may occur if not removed **immediately**. After turning the surface elements OFF, use a razor blade scraper or a metal spatula with a mitt and scrape the soil from the hot surface (as illustrated). Allow the cooktop to cool, and use the same method for heavy or burned on soils.

#### Do not use the following on the ceramic glass cooktop:

- **Do not use abrasive cleaners and scouring pads, such as metal and some nylon pads. They may scratch the cooktop, making it more difficult to clean.**
- **Do not use harsh cleaners, such as chlorine bleach, ammonia or oven cleaners, as they may etch or discolor the cooktop.**

- **Do not use dirty sponges, cloths or paper towels, as they can leave soil or lint on the cooktop which can burn and cause Special Caution for Aluminum Foil and Aluminum Cooking Utensils**

- **Aluminum foil**

Use of aluminum foil will damage the cooktop. Do not use under any circumstances.

- **Aluminum utensils**

Since the melting point of aluminum is much lower than that of other metals, care must be taken when aluminum pots or pans are used. Pans that boil dry may permanently damage cooktop by breaking, fusing to, or marking it.

### CARE AND CLEANING OF STAINLESS STEEL

Some models are equipped with stainless steel exterior parts. Special care and cleaning are **required** for maintaining the appearance of stainless parts. Refer to the **General Care & Cleaning** table for detailed cleaning instructions.

### CHANGING OVEN LIGHT

#### CAUTION

Be sure the oven is unplugged and all parts are COOL before replacing the oven light bulb. Do not turn the oven light on during a self-cleaning cycle. High temperature will reduce lamp life.

On some models an interior oven light will turn on automatically when the oven is opened. The oven light may be turned on when the door is closed by using the oven light switch located on the Electronic Oven control. The oven light bulb is covered with a glass shield held in place by a wire holder. THIS GLASS SHIELD MUST ALWAYS BE IN PLACE WHEN THE OVEN IS IN USE.

#### CAUTION

#### BE SURE OVEN IS COOL

#### To Replace the Light Bulb:

1. Turn the power off at the main source.
2. Wear a leather-faced glove for protection against possible broken glass.
3. Replace bulb with a 40 Watt appliance bulb only.
4. For self-cleaning oven, press wire holder to one side to release glass shield, change bulb and be sure to replace glass shield.

### REMOVING AND REPLACING THE LIFT-OFF OVEN DOOR

#### **CAUTION**

The door is heavy. For safe, temporary storage, lay the door flat with the inside of the door facing down.

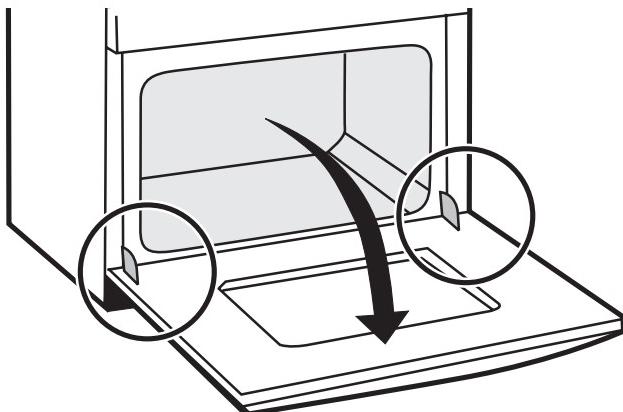

Most oven doors contain glass that can break.

Read the following recommendations:

1. Do not close the oven door until all the oven racks are fully in place.
2. Do not hit the glass with pots, pans, or any other object.
3. Scratching, hitting, jarring or stressing the glass may weaken its structure causing an increased risk of breakage at a later time.

#### To Remove Oven Door:

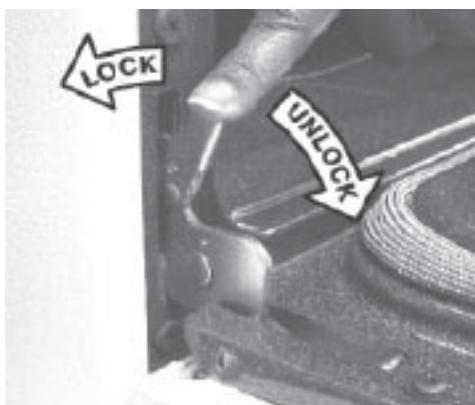

1. Open oven door completely (horizontal with floor - See Figure 1).

Door Hinge locations with oven door fully open

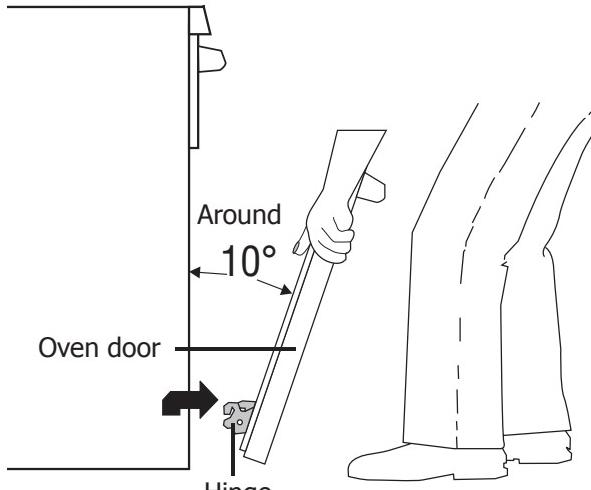

**Figure 1**

2. Pull the door hinge locks on both left and right door hinges down from the oven frame completely towards the oven door (See Figure 2). A tool such as a small flat-blade screwdriver may be required.

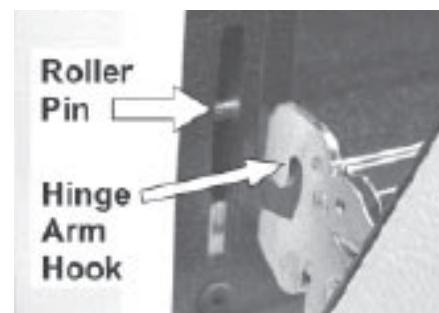

**Figure 2**

3. Firmly grasp both sides of oven door along the door sides (Do not use the oven door handle - See Figure 3).

**Figure 3**

4. Close the door to the broil stop position (the oven door will stop into this position just before fully closing).
5. With the oven door in the broil stop position, lift the oven door hinge arms over the roller pins located on each side of the oven frame (See Figure 4).

**Figure 4**

#### To Replace Oven Door:

1. Firmly grasp both sides of oven door along the door sides (Do not use the oven door handle - See Figure 3).
2. Holding the oven door at the same angle as the removal position, seat the hook of the hinge arm over the roller pins located on each side of the oven door frame (See Figure 4). The hook of the hinge arms must be fully seated onto the roller pins.
3. Fully open the oven door (horizontal with floor - See Figure 1).
4. Push the door hinge locks up towards and into the oven frame on both left and right oven door hinges (See Figure 2) to the locked position.
5. Close the oven door.

## BEFORE YOU CALL (Solutions to Common Problems)

### OVEN BAKING

For best cooking results, heat the oven before baking cookies, breads, cakes, pies or pastries, etc. There is no need to preheat the oven for roasting meat or baking casseroles.

The cooking times and temperatures needed to bake a product may vary slightly from your previously owned appliance.

Baking Problems and Solutions Chart

Baking Problems	Causes	Corrections
<b>Cookies and biscuits burn on the bottom.</b> 	<ul style="list-style-type: none"><li>• Cookies and biscuits put into the oven before the preheating time is completed.</li><li>• Oven rack overcrowded.</li><li>• Dark pan absorbs heat too fast.</li></ul>	<ul style="list-style-type: none"><li>• Allow oven to preheat to the selected temperature before placing food in oven.</li><li>• Choose pan sizes that will permit 5.1cm to 10.2cm (2" to 4") of air space on all sides when placed in the oven.</li><li>• Use a medium-weight aluminum baking sheet.</li></ul>
<b>Cakes too dark on top or bottom.</b> 	<ul style="list-style-type: none"><li>• Cakes put into the oven before preheating time is completed.</li><li>• Rack position too high or low.</li><li>• Oven too hot.</li></ul>	<ul style="list-style-type: none"><li>• Allow oven to preheat to the selected temperature before placing food in the oven.</li><li>• Use proper rack position for baking needs.</li><li>• Set oven temperature 25°F/12°C lower than recommended.</li></ul>
<b>Cakes not done in the center.</b> 	<ul style="list-style-type: none"><li>• Oven too hot.</li><li>• Incorrect pan size.</li><li>• Pan not centered in oven.</li></ul>	<ul style="list-style-type: none"><li>• Set oven temperature 25°F/12°C lower than recommended.</li><li>• Use pan size suggested in recipe.</li><li>• Use proper rack position and place pan so there is 5.1cm to 10.2cm (2" to 4") of space on all sides of pan.</li></ul>
<b>Cakes not level.</b> 	<ul style="list-style-type: none"><li>• Range not level.</li><li>• Pan too close to oven wall or rack overcrowded.</li><li>• Pan warped.</li></ul>	<ul style="list-style-type: none"><li>• Place a marked glass measuring cup filled with water on the center of the oven rack. If the water level is uneven, refer to the installation instructions for leveling the range.</li><li>• Be sure to allow 5.1cm to 10.2cm (2" to 4") of clearance on all sides of each pan in the oven.</li><li>• Do not use pans that are dented or warped.</li></ul>
<b>Foods not done when cooking time is up.</b> 	<ul style="list-style-type: none"><li>• Oven too cool.</li><li>• Oven overcrowded.</li><li>• Oven door opened too frequently.</li></ul>	<ul style="list-style-type: none"><li>• Set oven temperature 25°F/12°C higher than suggested and bake for the recommended time.</li><li>• Be sure to remove all pans from the oven except the ones to be used for baking.</li><li>• Open oven door only after shortest recommended baking time.</li></ul>

## BEFORE YOU CALL (Solutions to Common Problems)

### **IMPORTANT**

**Before you call for service,** review this list. It may save you time and expense. The list includes common occurrences that are not the result of defective workmanship or materials in this appliance.

OCCURRENCE	POSSIBLE CAUSE/SOLUTION
<b>Range is not level.</b>	<p>Poor installation. Place oven rack in center of oven. Place a level on the oven rack. Adjust leveling legs at base of range until the rack is level. When range is level, cooktop may appear out of alignment if countertop is not level.</p> <p>Weak, unstable floor. Be sure floor is level and can adequately support range. If floor is sagging or slopping, contact a carpenter to correct the situation.</p> <p>Kitchen cabinet misalignment may make range appear to be unlevel. Be sure cabinets are square and have sufficient room for range clearance.</p>
<b>Cannot move appliance easily. Appliance must be accessible for service.</b>	<p>Cabinets not square or are built in too tight. Contact a cabinet maker to correct the problem.</p> <p>Contact builder or installer to make appliance accessible.</p> <p>Carpet interferes with range. Provide sufficient space so range can be lifted over carpet.</p>
<b>Entire range or oven does not operate.</b>	<p>Make sure cord/plug is plugged tightly into outlet.</p> <p>Service wiring is not complete. Call an authorized servicer.</p> <p>Electrical power outage. Check house lights to be sure. Call your local electric company for service.</p>
<b>Cooktop control displays any E code error (ex.: E014)</b>	Cooktop control has detected a fault or error condition. Try turning electrical power supply OFF and back ON to cooktop in order to reset Cooktop main controls. If fault recurs, record the fault number and call an authorized servicer for assistance.
<b>Oven control beeps and displays any F code error (ex.: F11)</b>	Electronic control has detected a fault condition. Press CLEAR to clear the display and stop beeping. Reprogram oven. If fault recurs, record fault number. Press CLEAR and call an authorized servicer for assistance.
<b>Oven light does not work.</b>	<p>Replace or tighten bulb. See Changing Oven Light section in this Use &amp; Care Guide.</p> <p>Electrical power outage. Check house lights to be sure. Call your local electric company for service.</p>
<b>Surface unit does not heat.</b>	<p>No power to the appliance. Check steps under "Entire Range or Oven Does Not Operate" in this Before you Call checklist.</p> <p>Incorrect control setting. Make sure the correct control is on for the surface unit to be used.</p>
<b>Surface units too hot or not hot enough.</b>	<p>Incorrect control setting. Make sure the correct control is on for the surface unit to be used.</p> <p>Lightweight or warped pans used. Use only flat, evenly balanced, medium or heavyweight cookware. Flat pans heat better than warped pans. Cookware materials and weight of the material affect heating. Heavy-and medium-weight pans heat evenly. Because lightweight pans heat unevenly, foods may burn easily.</p>
<b>Drip bowls are pitting or rusting.</b>	<p>Foods with acids, such as tomatoes, if allowed to stand in/on bowls will cause corrosion. Remove and wash drip bowls as soon as possible after spillover.</p> <p>Normal environment. Houses along sea coast are exposed to salt air. Protect bowls as much as possible from direct exposure to salt air.</p>
<b>Drip bowls turning color or distorted out of shape.</b>	Bottom surface of cookware extends beyond surface elements and touches cooktop surface. This can cause high enough temperatures to discolor the drip bowls. DO NOT use cookware of this type. Pan sizes should be matched to the size of the element. Replacement drip bowls may be purchased from your dealer.
<b>Metalmarks.</b>	Sliding or scraping of metal utensils on cooktop surface. Do not slide metal utensils on cooktop surface. Use a ceramic-glass cooktop cleaning cream to remove the marks. "Cooktop Cleaning - Ceramic Glass Cooktop Models" section under General Cleaning.

## BEFORE YOU CALL (Solutions to Common Problems)

OCCURRENCE	POSSIBLE CAUSE/SOLUTION
<b>Scratches or abrasions on cooktop surface.</b>	<p>Coarse particles such as salt or sand between cooktop and utensils can cause scratches. Be sure cooktop surface and bottoms of utensils are clean before usage. Small scratches do not affect cooking and will become less visible with time.</p> <p>Cleaning materials not recommended for ceramic-glass cooktop have been used. See "Cooktop Cleaning - Ceramic Glass Cooktop Models" section under General Cleaning.</p> <p>Cookware with rough bottom has been used. Use smooth, flat-bottomed cookware.</p>
<b>Brown streaks or specks.</b>	Boilovers are cooked onto surface. Use razor blade scraper to remove soil. "Cooktop Cleaning - Ceramic Glass Cooktop Models" section under General Cleaning.
<b>Areas of discoloration with metallic sheen.</b>	Mineral deposits from water and food. Remove using a ceramic-glass cooktop cleaning cream. Use cookware with clean, dry bottoms.
<b>Poor baking results.</b>	Many factors affect baking results. Make sure the proper rack position is used. Center food in the oven and space pans to allow air to circulate. Allow the oven to preheat to the set temperature before placing food in the oven. Try adjusting the recipes' recommended temperature or baking time. If you feel the oven is too hot or cool, see "Adjusting Your Oven Temperature" section in the Electronic Oven Control Guide.
<b>Fan noise during cooking operation.</b>	A cooling fan may automatically turn on and off to cool internal parts. It is normal, and the fan may continue to run even after oven is turned off.
<b>Flames inside oven or smoking from vent.</b>	Excessive spillovers in oven. Set self-clean cycle for a longer cleaning time.
	Excessive spillovers in oven. This is normal, especially for pie spillovers or large amounts of grease on the oven bottom. Wipe up excessive spillovers before starting the self-clean cycle. If flames or excessive smoke are present, stop the self-clean cycle and follow the steps under "Stopping or Interrupting the Self-Cleaning Cycle" in the Electronic Oven Control Guide.
<b>Oven smokes excessively during broiling.</b>	Control(s) not set properly. Follow instructions under "Setting Oven Controls".
	Make sure oven is opened to Broil Stop Position.
	Meat too close to the element. Reposition the rack to provide proper clearance between the meat and the element. Preheat broil element. Preheat broil element for searing.
	Grid on broiler pan wrong side up and grease not draining. Always place grid on the broiler pan with ribs up and slots down to allow grease to drip into pan.
	Grease has built up on oven surfaces. Regular cleaning is necessary when broiling frequently. Old grease or food spatters cause excessive smoking.
<b>Self-cleaning cycle does not work.</b>	Control(s) not set properly. Follow instructions under "Oven Cleaning" in the Electronic Oven Control Guide.
	Self-cleaning cycle was interrupted. Stop time must be 2 to 4 hours past the start time. Follow steps under "Stopping or Interrupting the Self-Cleaning Cycle" in the Electronic Oven Control Guide.
<b>Soil not completely removed after self-cleaning cycle.</b>	<p>Set Self-Clean cycle for a longer cleaning time.</p> <p>Failure to clean bottom front, top of oven or door areas outside oven seal. These areas are not in the Self-Cleaning area, but get hot enough to burn on food residue. Clean these areas before starting the Self-Clean cycle. Burned-on residue may be cleaned with a stiff nylon brush and water or nylon scrubber. Be careful not to damage the oven gasket.</p>
<b>Excessive smoking from oven vent.</b>	Excessive spillovers in oven, especially for pie spillovers or large amounts of grease on the oven bottom. Wipe up excessive spillovers before starting the Self-Clean cycle. If flames or excessive smoke are present, stop the Self-Clean cycle and follow the steps under "Stopping or Interrupting the Self-Cleaning Cycle" in the Electronic Oven Control Guide.

# MAJOR APPLIANCE WARRANTY

Your appliance is covered by a one year limited warranty. For one year from your original date of purchase, Electrolux will pay all costs for repairing or replacing any parts of this appliance that prove to be defective in materials or workmanship when such appliance is installed, used and maintained in accordance with the provided instructions.

## **Exclusions This warranty does not cover the following:**

1. Products with original serial numbers that have been removed, altered or cannot be readily determined.
2. Product that has been transferred from its original owner to another party or removed outside the USA or Canada.
3. Rust on the interior or exterior of the unit.
4. Products purchased "as-is" are not covered by this warranty.
5. Food loss due to any refrigerator or freezer failures.
6. Products used in a commercial setting.
7. Service calls which do not involve malfunction or defects in materials or workmanship, or for appliances not in ordinary household use or used other than in accordance with the provided instructions.
8. Service calls to correct the installation of your appliance or to instruct you how to use your appliance.
9. Expenses for making the appliance accessible for servicing, such as removal of trim, cupboards, shelves, etc., which are not a part of the appliance when it is shipped from the factory.
10. Service calls to repair or replace appliance light bulbs, air filters, water filters, other consumable, or knobs, handles, or other cosmetic parts.
11. Surcharges including, but not limited to, any after hour, weekend, or holiday service calls, tolls, ferry trip charges, or mileage expense for service calls to remote areas, including the state of Alaska.
12. Damages to the finish of appliance or home incurred during installation, including but not limited to floors, cabinets, walls, etc.
13. Damages caused by: services performed by unauthorized service companies; use of parts other than genuine Electrolux parts or parts obtained from persons other than authorized service companies; or external causes such as abuse, misuse, inadequate power supply, accidents, fires, or acts of God.

## **DISCLAIMER OF IMPLIED WARRANTIES; LIMITATION OF REMEDIES**

Customer's sole and exclusive remedy under this limited warranty shall be product repair or replacement as provided herein. Claims based on implied warranties, including warranties of merchantability or fitness for particular purpose, are limited to one year or the shortest period allowed by law, but not less than one year. Electrolux shall not be liable for consequential or incidental damages such as property damage and incidental expenses resulting from any breach of this written limited warranty or any implied warranty. Some states and provinces do not allow the exclusion or limitation of incidental or consequential damages, or limitations on the duration of implied warranties, so these limitations or exclusions may not apply to you. This written warranty gives you specific legal rights that vary from state to state.

## **If You Need Service**

Keep your receipt, delivery slip, or some other appropriate payment record to establish the warranty period should service be required. If service is performed, it is in your best interest to obtain and keep all receipts. Service under this warranty must be obtained contacting Electrolux at the addresses or phone numbers below.

This warranty only applies in the USA and Canada. In the USA, your appliance is warranted by Electrolux Major Appliances North America, a division of Electrolux Home Products, Inc. In Canada, your appliance is warranted by Electrolux Canada Corp. Electrolux authorizes no person to change or add to any obligations under this warranty. Obligations for service and parts under this warranty must be performed by Electrolux or an authorized service company. Product features or specifications as described or illustrated are subject to change without notice.
